Dennis Lehmkuhl,Gregor Schiemann,Erhard Scholz,2017-01-05 This contributed volume is the result of a July 2010 workshop at the University of Wuppertal Interdisciplinary Centre for Science and Technology Studies which brought together world wide experts from physics philosophy and history in order to address a set of questions first posed in the 1950s How do we compare spacetime theories How do we judge objectively which is the best theory Is there even a unique answer to this question The goal of the workshop and of this book is to contribute to the development of a meta theory of spacetime theories Such a meta theory would reveal insights about specific spacetime theories by distilling their essential similarities and differences deliver a framework for a class of theories that could be helpful as a blueprint to build other meta theories and provide a higher level viewpoint for judging which theory most accurately describes nature But rather than drawing a map in broad strokes the focus is on particularly rich regions in the space of spacetime theories This work will be of interest to physicists as well as philosophers and historians of science working with or interested in General Relativity and or Space Time and Gravitation more generally **Science** John Michels (Journalist),1925 **An Overview of General Relativity and Space-Time** Nicola Vittorio,2022-12-29 This textbook equips Masters students studying Physics and Astronomy with the necessary mathematical tools to understand the basics of General Relativity and its applications It begins by reviewing classical mechanics with a more geometrically oriented language continues with Special Relativity and then onto a discussion on the pseudo Riemannian space times Applications span from the inner and outer Schwarzschild solutions to gravitational wave black holes spherical relativistic hydrodynamics and Cosmology The goal is to limit the abstract formalization of the problems to favor a hands on approach with a number of exercises without renouncing to a pedagogical derivation of the main mathematical tools and findings Features Provides a self contained introduction to General Relativity and to its standar applications Presents readers with all the tools necessary for further learning and research in the field Accessible to readers with just foundational knowledge of linear algebra and Lagrangian mechanics **The Wave Equation on a Curved Space-Time** F.
