caused by environmental factors notably including disease These basics are linked to model the dynamical patterns of breathing as a whole The ideas presented in the book are validated using real data generated from healthy subjects and respiratory patients and rest on non invasive measurement methods The Human Respiratory System will be of interest to applied mathematicians studying the modelling of biological systems to clinicians with interests outside the traditional borders of medicine and to engineers working with technologies of either direct medical significance or for mitigating changes in the respiratory system caused by for example high altitude or deep sea environments *The Hindu-yogi science of breath* William Walker Atkinson,1905 **The Control of the Breath** George Dodds,James Dunlop Lickley,1925
