ABSTRACT

The purpose of this study was to investigate the effects of a Text Structure Reading Strategy, TSRS, Instruction Program, a Web-based Computer Assisted Language Learning (CALL) program for teaching text structure reading strategy, on Thai university EFL students' reading comprehension, and to examine their opinions towards the program and its usefulness. The samples consisted of 86 students with medium and low English reading proficiency who registered for Foundation English III during the summer semester of academic year 2009 at Kasetsart University Chalamphrakiat Sakon Nakhon Province Campus. They were divided into an experimental group ($n = 42$) and a control group ($n = 44$). The two groups took the pre-test, then the experimental group learned with TSRS, but the control group studied the texts from the Voice of America (VOA) Special English. Then the two groups took the post-test. The quantitative data were collected using a pre- and post-test and a questionnaire, and then were analyzed using ANCOVA, arithmetic mean, standard deviation, and percentage. A semi-structured interview was used to collect the qualitative data which were then analyzed using content analysis. The results were that the experimental group scored significantly higher than the control group in the post-comprehension test ($p < .01$). The students who learned with TSRS had very positive opinions towards the program and its usefulness ($\bar{X} = 3.86$, S.D. = .64). The findings suggest that self-paced instruction and explicit instruction in relation to students' schema activation and construction, provision of L1 help, and an appropriate order of expository text structure teaching were conducive to higher achievement in English reading comprehension. Recommendations for further research are also provided.
