Adaptive and Multistage Testing with R David Magis,Duanli Yan,Alina A. von Davier,2017-11-23 The goal of this guide and manual is to provide a practical and brief overview of the theory on computerized adaptive testing CAT and multistage testing MST and to illustrate the methodologies and applications using R open source language and several data examples Implementation relies on the R packages catR and mstR that have been already or are being developed by the first author with the team and that include some of the newest research algorithms on the topic The book covers many topics along with the R code the basics of R theoretical overview of CAT and MST CAT designs CAT assembly methodologies CAT simulations catR package CAT applications MST designs IRT based MST methodologies tree based MST methodologies mstR package and MST applications CAT has been used in many large scale assessments over recent decades and MST has become very popular in recent years R open source language also has become one of the most useful tools for applications in almost all fields including business and education Though very useful and popular R is a difficult language to learn with a steep learning curve Given the obvious need for but with the complex implementation of CAT and MST it is very difficult for users to simulate or implement CAT and MST Until this manual there has been no book for users to design and use CAT and MST easily and without expense i e by using the free R software All examples and illustrations are generated using predefined scripts in R language available for free download from the book s website *An Applied Study on Computerized Adaptive Testing* Wouter Schoonman,1989 **Computer-Based Testing** Craig N. Mills,Maria T. Potenza,John J. Fremer,William C. Ward,2005-04-11 Although computer based tests CBT have been administered for many years improvements in the speed and power of computers coupled with reductions in their cost have made large scale computer delivery of tests increasingly feasible CBT is now a common form of test delivery for licensure certification and admissions tests Many large scale high stakes testing programs have introduced CBT either as an option or as the sole means of test delivery Although this movement to CBT has to a great extent been successful it has not been without problems Advances in psychometrics are required to ensure that those who rely on test results can have at least the same confidence in CBTs as they have in traditional forms of assessment This volume stems from an ETS sponsored colloquium in which more than 200 measurement professionals from eight countries and 29 states convened to assess the current and future status of CBT The formal agenda for the colloquium was divided into three major segments Test Models Test Administration and Test Analysis and Scoring Each segment consisted of several presentations followed by comments from noted psychometricians and a break out session in which presenters and discussants identified important issues and established priorities for a CBT research agenda This volume contains the papers presented at the colloquium the discussant remarks based on those papers and the research agenda that was generated from the break out sessions *Computer Based Testing Building the Foundation for Future Assessments* is must reading for professionals scholars and advanced students working in the testing field as well as people in the information technology field who have an interest in testing **Issues in Computer-Adaptive Testing of Reading**

Computerized Multistage Testing Duanli Yan,Alina A. von Davier,Charles Lewis,2016-04-19 Unlike other forms of adaptive testing multistage testing MST is highly suitable for testing educational achievement because it can be adapted to educational surveys and student testing This volume provides the first unified source of information on the design psychometrics implementation and operational use of MST It shows how to apply theoretical statistical tools to testing in novel and useful ways It also explains how to explicitly tie the assumptions made by each model to observable or at least inferable data conditions
