

# 5 components of information systems

1

**Hardware** is the tangible technology used to manage data. Examples include computers, smartphones, and their components.

2

**Software** is the intangible programming that directs hardware and enables users to perform specific tasks.

3

**Data sources** house data that can be retrieved, manipulated, and analyzed to make decisions. Examples include databases and data warehouses.

4

**Telecommunications** refers to the pathways through which devices and software can send data to each other.

5

Not *everything* can be handled by robots—**human expertise** (provided by data analysts and other experts) is crucial for improving processes.
