Bodies in Code Mark B. N. Hansen, 2012-10-02 Bodies in Code explores how our bodies experience and adapt to digital environments Cyberculture theorists have tended to overlook biological reality when talking about virtual reality and Mark B N Hansen s book shows what they ve been missing Cyberspace is anchored in the body he argues and it s the body not high tech computer graphics that allows a person to feel like they are really moving through virtual reality Of course these virtual experiences are also profoundly affecting our very understanding of what it means to live as embodied beings Hansen draws upon recent work in visual culture cognitive science and new media studies as well as examples of computer graphics websites and new media art to show how our bodies are in some ways already becoming virtual [Digital Bodies](#)

John Troyer, 2020-04-14 One of our greatest thinkers on death presents a radical new approach to thinking about dying and the human corpse Caitlin Doughty mortician and bestselling author of *Smoke Gets in Your Eyes* A fascinating exploration of the relationship between technology and the human corpse throughout history from 19th century embalming machines to 21st century death prevention technologies Death and the dead body have never been more alive in the public imagination not least because of current debates over modern medical technology that is deployed it seems expressly to keep

human bodies from dying blurring the boundary between alive and dead In this book John Troyer examines the relationship of the dead body with technology both material and conceptual the physical machines political concepts and sovereign institutions that humans use to classify organize repurpose and transform the human corpse Doing so he asks readers to think about death dying and dead bodies in radically different ways Troyer explains for example how technologies of the nineteenth century including embalming and photography created our image of a dead body as quasi atemporal existing outside biological limits formerly enforced by decomposition He describes the Happy Death Movement of the 1970s the politics of HIV AIDS corpse and the productive potential of the dead body the provocations of the Body Worlds exhibits and their use of preserved dead bodies the black market in human body parts and the transformation of historic technologies of the human corpse into death prevention technologies The consequences of total control over death and the dead body Troyer argues are not liberation but the abandonment of Homo sapiens as a concept and a species In this unique work Troyer forces us to consider the increasing overlap between politics dying and the dead body in both general and specifically personal terms

Bodies of Technology Ann Rudinow Saetnan, Nelly Oudshoorn, Marta Stefania Maria Kirejczyk, 2000 This work is based on a concern for women's health and autonomy and on the premise that technology and society mutually shape one another A basic question is one of cultural appropriation Do technologies take on different shapes different practices and have different impacts as they spread from one place to another By juxtaposing a number of culturally and historically contextualized studies of similar technologies the editors demonstrate that although technologies globalize by spreading among cultures they are also localized by the cultures they encounter
