Multiphase Flow Metering Gioia Falcone,Geoffrey Hewitt,C. Alimonti,2009-11-16 Over the last two decades the development evaluation and use of MFM systems has been a major focus for the Oil Gas industry worldwide Since the early 1990 s when the first commercial meters started to appear there have been around 2 000 field applications of MFM for field allocation production optimisation and well testing So far many alternative metering systems have been developed but none of them can be referred to as generally applicable or universally accurate Both established and novel technologies suitable to measure the flow rates of gas oil and water in a three phase flow are reviewed and assessed within this book Those technologies already implemented in the various commercial meters are evaluated in terms of operational and economical advantages or shortcomings from an operator point of view The lessons learned about the practical reliability accuracy and use of the available technology is discussed The book suggests where the research to develop the next generation of MFM devices will be focused in order to meet the as yet unsolved problems The book provides a critical and independent review of the current status and future trends of MFM supported by the authors strong background on multiphase flow and by practical examples These are based on the authors direct experience on MFM gained over many years of research in connection with both operators and service companies As there are currently no books on the subject of Multiphase Flow Metering for the Oil Gas industry this book will fill in the gap and provide a theoretical and practical reference for professionals academics and students Written by leading scholars and industry experts of international standing Includes strong coverage of the theoretical background yet also provides practical examples and current developments Provides practical reference for professionals students and academics

Energy Potential of the Russian Arctic Seas Alexey Piskarev,Mikhail Shkatov,2012-10-18 The structure of sedimentary basins of the Russian Arctic Seas is studied and illustrated by a number of maps cross sections and geophysical models The calculated density models of the Earth crust illustrate the deep structure of the main blocks of the crust Five major gas condensate and gas fields are discovered here three Shtokman Ludlov Ledovoe in the Barents and two Leningrad and Rusanov in the Kara Sea Geological and geophysical characteristics of the Russian Arctic Sea sedimentary basins allow an estimation of their hydrocarbon potential by comparison with the known world analogues Total potential resources of giant deposits of hydrocarbons in Russian Arctic Seas are estimated at 470 billion barrels of oil equivalent The richest resources are the Kara Sea and Laptev Sea Less rich is Barents Sea The relatively smaller contribution to the overall estimation of the resources makes the resources of East Siberian Sea and Chukchi Sea Development the energy capacity of the continental shelf of Russia can play a stabilizing role in the dynamics of oil and gas production in the period 2010 2020 A key role in developing the capacity of the Arctic shelf oil and gas play is the innovative technology in exploration production and management of the relevant investment projects World offshore experience indicates that the combination of these factors is achieved through the formation of international firms and organizations Comprehensively assesses the potential oil and gas resources in sedimentary basins within the Russian sector of the Arctic Ocean Describes the economic and legal challenges to the development of offshore fields in Russia Explores possible ways and timing to make these hydrocarbon resources available to the global market
