China's Transition Andrew James Nathan, 1997 With more than one billion people China represents both an ocean of economic opportunity and a frustrating backwater of continuing brutal political repression What are the prospects for democratic evolution in a nation with one of the world's poorest human rights records How have other nations responded to China since the recent dramatic opening of its economic system and how should they respond in the future These are some of the most important questions confronting both the United States and the international community On democracy human rights and the move to integrate China into the international economy on Mao Zedong's regime and the reform since his death and on the Taiwan experiment and Hong Kong's reintegration with China Nathan offers an accessible introduction to the intricate web of contemporary Chinese politics and China's changing place in the global system *Uncertain Passage:*

China's Transition from Communism - New

Perspectives Guoguang Wu, Helen Lansdowne, 2015-11-06 As China moved from a planned to a market economy many people expected that China's political system would similarly move from authoritarianism to democracy It is now clear however that political liberalisation does not necessarily follow economic liberalisation This book explores this apparent contradiction presenting many new perspectives and new thinking on the subject It considers the path of transition in China historically makes comparisons with other countries and examines how political culture and the political outlook in China are developing at present A key feature of the book is the fact that most of the contributors are China born Western trained scholars who bring deep knowledge and well informed views to the study *China's Transition to a Global Economy* Michael Webber, 2002-12-13 How has China approached the global economy Webber Wang and Zhu attempt to answer this question through analysis of the concepts of globalization transition and regionalization China's approach has been experimental stressing the liberalization of trade and investment flows and the development of a market economy By these indexes globalization in China has been gradual and uneven Integrating Western social science and Chinese research this book assesses the nature and effect of globalization in China and its implications *China's Transition to a Socialist Market Economy* Osman Suliman, 1998-09-17 Exploring China's transition to a socialist market economy this book finds that the recent Chinese experience is unique and unprecedented It seems plausible that the distinctive characteristics of China's market reform have been a result of correcting the big bang approach of Eastern European countries and unique conditions that China possesses For instance China is endowed with a relatively high level of skilled labor and a large workforce Moreover China has been experimenting with reform and profit sharing for a number of years especially in the coastal provinces This book juxtaposes native Chinese experiences with those of academics in the U S It integrates the ideas of those living the experience in China with the perceptions of outside observers who might be able to offer constructive criticism The book covers various topics such as macroeconomic policy reform within economic sectors and strategies for sustainable

development while making sure that the reader will not find it difficult to follow the process of reform and the main impediments that China may face

Corporate Governance and Financial Reform in China's Transition Economy

Jing Leng, 2009-06-01 The world economy is facing unprecedented challenges brought by the still unfolding global financial crisis At this critical juncture in history China's economic performance and financial stability are closely watched across the world The current global economic downturn and the rigidities it poses on the growth prospects of any individual economy are a testing ground for the effects of China's corporate governance reform and financial reform that have been taking place in recent years It is now a proper time to assess whether these reforms have yielded meaningful results which can help China withstand and navigate through the most severe economic difficulties of our times This book provides a comprehensive and up to date review and critique of corporate governance reforms and related financial reforms in China during the country's transition to a market economy involving its enterprise banking and capital markets sectors China's participation in economic globalization symbolized by its accession to the World Trade Organization is taken as a broad background to the country's domestic reform agenda By exploring the dynamics of China's evolving corporate governance regime this book presents an important country study of corporate governance reforms in developing and post communist transition economies to show the possibility of alternative paths to the market

Zhou, 2022-11-22 The Chinese economy is currently undergoing fundamental changes In this context the 2022 China Update examines the key characteristics of China's transition towards a new phase of economic growth and development This year's update book covers a range of diverse topics that reflect the complex and changing nature of the economy It explores critical questions Why does China need a new development paradigm and what is the best way to achieve it What are China's choices when faced with the restructuring of global industrial value chains What key roles will domestic consumption play in the next phase of China's development What does the digital transformation mean for the Chinese economy What has been the domestic impact of the Covid 19 pandemic on income inequality and labour market outcomes What pathways exist for China in its transition towards carbon neutrality How does China's emissions trading market compare with that of Europe How will China's carbon neutrality strategy affect the Australian economy What are the political factors influencing bilateral trade flows between China and its trading partners And what is at stake for China US relations

China's Transition to Industrialism Thomas G. Rawski, 2025-10-01

China's Transition to Industrialism studies the history and development of a group of industries which have played key roles in China's recent economic gains Drawing on a wide range of materials the author focuses on engineering chemicals and allied producer industries showing how the growth of these sectors sparked a dynamic process of development which has spread to encompass the entire Chinese economy Rawski traces this industrialization process to three distinct sources vigorous prewar development in the private sector which created a nucleus of experienced producers in Shanghai and other urban centers the resource mobilization efforts of the post 1949 Communist

government and a series of economic reforms which relaxed the performance constraints found in other socialist economies and stimulated a burst of innovative activity which has propelled China's economy from the depression of the early 1960s to a record of economic achievement unmatched among the large nations of the developing world **China in Transition**

Ronald Glassman, 1991-08-30 As recent events in the Far East have demonstrated China is a nation that is in the midst of a massive social and political upheaval. The Chinese leadership is as uncertain as the populace on the future course for modern China and remains dramatically split over capitalism and communism, pragmatism and realism, and democracy and despotism. In this work Ronald Glassman analyzes the remarkable changes that are occurring in China and examines the country's difficult movement from state-run economics to free enterprise and from Communist Party dictatorship to electoral democracy. The book focuses on the emergence of a modern middle class in China, illuminating their political and economic desires and their impact in a postcommunist society. Glassman provides a Weberian analysis of the recent radical changes using the concepts of rationalization, the bureaucratic middle strata, the greater degree of efficiency of capitalism over socialism, the independent power of the state, and charismatic leadership to help explain China's transition to modernity. His study is divided into four sections covering the majority middle class and democracy, free enterprise and democracy, the transition to a legal democratic state, and political culture, legitimacy and charisma. The book concludes with the thesis that China will make the transition to democracy when the new generation of leaders comes to power and the middle class becomes the mediating stratum. Students of sociology, political science, and Chinese history will find this work to be a valuable resource, as will both public and academic libraries. **China's Transition to Markets** Yingyi Qian, Tetsuya Kataoka, Barry R. China's Transition to a New Phase of Development Ligang Song, Yixiao Zhou, 2022-11-22 The Chinese economy is currently undergoing fundamental changes. In this context, the 2022 China Update examines the key characteristics of China's transition towards a new phase of economic growth and development. This year's update book covers a range of diverse topics that reflect the complex and changing nature of the economy. It explores critical questions: Why does China need a new development paradigm and what is the best way to achieve it? What are China's choices when faced with the restructuring of global industrial value chains? What key roles will domestic consumption play in the next phase of China's development? What does the digital transformation mean for the Chinese economy? What has been the domestic impact of the Covid-19 pandemic on income inequality and labour market outcomes? What pathways exist for China in its transition towards carbon neutrality? How does China's emissions trading market compare with that of Europe? How will China's carbon neutrality strategy affect the Australian economy? What are the political factors influencing bilateral trade flows between China and its trading partners? And what is at stake for China-US relations. **Transition and Development in China** Mr Yun Chen, 2012-11-28 China's transition from a planned economy to a market economy has succeeded in producing more than a decade of phenomenal growth. Whilst similar reforms in countries of Central and Eastern Europe and

the former Soviet Union have seen an initial downturn in production usually with a significant rise in unemployment the success of the approach taken by China has been remarkable However China embarked upon the process without a well designed blueprint at the outset The resulting piecemeal partial incremental and often experimental approach has proved complicated to implement requiring a complex melding of politics and economics internal and foreign affairs government and market How the difficult task of balancing the diverse array of often competing concerns has been achieved is the subject of this book which examines the dismantling of the centrally planned system and the mechanism of institutional change in Chinese transition

China's Transition from Socialism Dorothy J. Solinger, 1993 The essays in this volume address the industrial commercial urban and regional reforms of China's planned economy during the 1980s The emphasis is on the dominating institutional and bureaucratic presence of the state even as it sought to loosen the pre 1979 vertically structured centralised command system and to introduce some market principles to stimulate economic activity The essays fall into four categories theoretical and policy discussions and debates at the central leadership level reform of the urban economy and of inter regional relations industrial and commercial reforms and the rise and position of the new entrepreneurial class Many of the essays draw on interviews with Chinese economic officials in the Central China city of Wuhan and therefore this is the only study that uses local data on actual operations of reforms from a Chinese city the other sources are the Chinese press and Chinese official and scholarly journals In each of the categories there are pieces from different points in the chronological process of reform This study begins with the first theoretical discussions among China's economists and top political leaders in the late 1970s and concludes with experiments with bankruptcy and stock markets in the late 1980s The countervailing heavy presence of the state at both the policy and the practical levels throughout the reform decade is its unifying theme

Transition and Development in China Yun Chen, 2017 China's transition from a planned economy to a market economy has succeeded in producing more than a decade of phenomenal growth Whilst similar reforms in countries of Central and Eastern Europe and the former Soviet Union have seen an initial downturn in production usually with a significant rise in unemployment the success of the approach taken by China has been remarkable However China embarked upon the process without a well designed blueprint at the outset The resulting piecemeal partial incremental and often experimental approach has proved complicated to implement requiring a complex melding of politics and economics internal and foreign affairs government and market How the difficult task of balancing the diverse array of often competing concerns has been achieved is the subject of this book which examines the dismantling of the centrally planned system and the mechanism of institutional change in Chinese transition Provided by publisher

China's Transition Toward a Market Economy, Civil Society, and Democracy Xia Li Lollar, 1997 China's post Mao economic reform continues to be carried out under the leadership of those committed to the philosophy of Deng Xiao Ping for building a modernized China The main feature of the reform is to change a planned economy to a market economy the primary difference being the degree to which

economic power is concentrated or decentralized In other words the success of changing from a planned to a market economy depends on transferring power from the central government to industrial enterprises Yet China s economic system has three levels the central government the intermediate local governments and the industrial enterprises Scholars disagree over whether the central government s power is transferring to the intermediate local government level or to the enterprises as the reform intended The major consideration in this book is to test whether economic decision making power was transferred to industrial enterprises after 1978 as most Chinese scholars believe or whether local governments instead gained some or all of the decision making power as generally claimed by Western scholars

China's Transitional Economy Andrew George Walder, 1996 China s post Mao economic reforms have generated and sustained economic growth unprecedented rises in real income and living standards and have transformed a long time insular economy into a major trading nation China now figures prominently in international policy debates about what is to be done to transform the stagnating economies of Eastern Europe As a gradual rather than an abrupt transition to the market with public industry protected rather than subject to privatization China s reform path has confounded the widespread and deeply held belief that gradual reform and public ownership simply cannot work The contributions to this volume draw out the policy and theoretical implications of China s transitional economy They lay out the notable features of China s reform path analyse the successes and failures of the reform and discuss whether they can be sustained or whether the uncertain leadership transition growing potential for social instability and continuing problems of unemployment uprooted rural populations deepening political corruption and declining central power point to a future fraught with risk and instability After an introduction and overview by the editor the first two chapters ask whether China enjoyed advantages that may have made its reform path easier than those of Eastern European countries The next four chapters examine various dimensions of China s economy agricultural commerce property rights foreign trade and macroeconomic stability Two subsequent chapters examine the role of political institutions and the final chapter synthesising the lessons of China s reforms critiques the dogmatism of some economic analysis and calls for greater institutional and historical realism

China's Transition Into the 21st Century David L. Shambaugh, Zhongchun Wang, 1996 This past April the Army War College s Strategic Studies Institute held its Seventh Annual Strategy Conference The theme China Into the 21st Century Strategic Partner and or Peer Competitor was especially timely Dr David Shambaugh and Senior Colonel Wang Zhongchun look at China from two very different perspectives Professor Shambaugh contends that those who succeed Deng Xiaoping fearful of any further erosion of Communist Party hegemony and determined to return China to a purer form of neo Maoist Marxism will become even more conservative as China s economic and social problems intensify Despite considerable political and economic challenges his best estimate is that China will from inherent inertia muddle through well into the 21st century Indeed it is in the interests of the United States for China to hold together as a territorial nation state and political unit because disintegration would foster

socio economic dislocations that could destabilize Asia At the same time U S policy must maintain pressure on China to improve human and civil rights performance Senior Colonel Wang Zhongchun provides a tour d horizon of nearly a half century of Chinese defense policy from a distinctly PRC perspective He then argues that China has attained a position of security and even though the world presents many uncertainties Beijing is committed to playing a positive role for peace and stability in Asia The central principle in today s security analysis is that defense policy must support economic development so that China can grow into an economically progressive democratic and modern socialist country Colonel Wang portrays China s military posture as one that seeks above all to protect China s territorial sovereignty while focusing in this relatively peaceful era on modernizing in step with national economic development

Transition from Communism in China Edwin A. Winckler,1999 Looks at China s transition in comparison to other transitions from communism going beyond comparisons of whole countries to comparisons of institutional sectors and compares differing theoretical approaches to regime type and regime change Subjects include Leninist adaptability in China and Taiwan military dimensions of regime transition economic crisis and market transition in the 1990s principal agent analysis of fiscal decentralization state birth planning and reconstituting the arts and sciences Annotation copyrighted by Book News Inc Portland OR
