Comparative Education Brian Holmes,2018-05-08

Originally published in 1981 Presented here is a coherent theory of Comparative Education research based on the traditions and innovations established by such pioneers as Joseph Lauwerys and Nicholas Hans From the author s substantive studies emerges a taxonomy for education based on Popper s critical dualism and a way of analysing problems based on Dewey s reflective thinking and the social change theories of people such as Marx Ogben and Pareto Models of formal organisations drawn from Talcott Parsons show how systems analyses can be made in comparative perspective and how the processes of policy formulation adoption and implementation can be studied The use of ideal typical normative models illustrates how comparative educationists can penetrate aspects of man s socially created worlds These techniques are exemplified in succinct models against which debates about education in Western Europe Plato the USA Dewey and the USSR Marx Engels and Lenin can be analysed Against the crude use of comparative arguments and transplantation of foreign practices Dr Holmes suggests that problems should be analysed and the outcomes of hypothetical solutions or policies should be tested under identified national circumstances The distinctive feature of this book is that it takes account of the debate among social scientists rejects both induction and ethnomethodology as adequate in themselves and brings together the problem solving approach favoured by American research workers and the hypothetico deductive method of enquiry advocated by natural scientists such as Sir Peter Medawar and Sir John Eccles

Introducing Comparative Education A. R. Trethewey,2014-05-18

Introducing Comparative Education aims to familiarize newcomers with comparative education as a field of study and to provide a continuing reference as people become more actively involved with comparative studies and the problems associated with developing them in rigorous and productive ways The purposes and methods of comparative education are also discussed Comprised of eight chapters this book begins by presenting a neat simple and generally accepted definition of comparative education The reader is then introduced to the history and development of comparative education the purposes of comparative education some of the pitfalls in trying to compare education or educational systems across cultural and national boundaries and some of the alternative methods open to those who would like to develop studies in comparative education The approaches associated with Isaac Kandel Nicholas Hans and G Z F Bereday Brian Holmes Edmund King Harold Noah and Max Eckstein are considered The book concludes with a listing of resources for teaching and learning This monograph is intended for students and educators

Theories and Methods in Comparative Education Jürgen Schriewer,Brian Holmes,1992

Issues of methodology have been at the centre of debate among Comparative Educationists for decades The essays in this volume written by scholars from Europe Latin

America and the USA reflect current interests in the changing metascientific discourse in the field of Comparative Education. A shift in the nature of this discourse from prescription to socio-historical description is particularly clear in the essays in Part I in which frameworks are developed within which analyses of the field's differing traditions, currents, and paradigms can be made. Theories which direct attention to historical explanations and policy-oriented predictions and which inform conceptual problems in making cross-cultural comparisons are examined in Part II. In these essays, reference is made to both the different epistemological premises and the application of such theories to substantive comparative research. The essays in Part III add an unusual dimension to methodological debates in so far as they define the disciplinary status and theoretical functions of Comparative Education within the wider context of Education or Educology as the basic discipline.

Comparative Education Research Mark Bray, Bob Adamson, Mark Mason, 2007-08-21

Approaches and methods in comparative education research are of obvious importance but do not always receive adequate attention. This book contributes new insights within the longstanding traditions of the field. A particular feature is the focus on different units of analysis: individual chapters compare places, systems, times, cultures, values, policies, curricula, and other units. These chapters are contextualised within broader analytical frameworks which identify the purposes and strengths of the field. The book includes a focus on intra-national as well as cross-national comparisons and highlights the value of approaching themes from different angles. The book will be of great value not only to producers of comparative education research but also to consumers who wish to understand more thoroughly the parameters and value of the field.

COMPARATIVE EDUCATION T. MANICHANDER,

Comparative Studies and Educational Decision Edmund King, 2012-05-04

This volume offers a conceptual justification and methodology for comparative studies of education, matching developments in the social sciences and other comparative disciplines. It also relates comparative studies of education to the practical business of policy formulation at all levels. Thus it bridges the widening gap between the purely academic world and the world of decision for development. The author draws illustrations from educational reforms but goes further in suggesting suitable procedures or institutions which might achieve soundly based policies and secure their implementation. He takes account of the planning techniques and

achievements of UNESCO OECD and other international organizations and examines the activities and aims of national planning for education in a wider perspective of world re orientation
