Telecommunications J. Gregory Sidak, Christoph Engel, Günter Knieps, 2012-12-06 This volume brings together academic economists and lawyers to evaluate and compare the regulation of telecommunications markets in Germany and the United States The unifying theme in all of the papers is that the goal of public policy in this area should be to make the broadest and most functional competition possible by means of an appropriate regulatory framework Because the European and American telecommunications markets are becoming more intertwined each day the issues addressed in this volume will be topical to the business government and academic communities for some time For the chairman of the Monopoly Commission Wernhard Moschel the opening of the German telecommunications market has been successful in principle This is clearly recognizable in the case of the competition in long distance transport Based on the view that the regulatory authority should make itself obsolete Professor Moschel advocates an incremental review and gradual reduction of regulation

Competition and Investment in Telecommunications and Media Markets Roberto Balmer, 2014-01-20 This book reviews the economic literature on cooperative investment in next generation broadband networks and geographic regulation It additionally proposes innovative models for estimating the level of competition and investment in the fixed telephony market and the retail market for newspapers In doing so it addresses two hotly debated issues in business strategy and economic policy the determinants of investment and competition and the impacts of innovative investment schemes The first chapter reviews the literature on new cooperative investment schemes in next generation broadband networks and geographic regulation The effects on competition investment and welfare of such schemes crucially depend on the details of the agreements For instance in the case of joint ventures the manner in which investment costs are shared and internal and external access prices are determined significantly impacts the outcome In the case of long term access agreements it is essential to consider how access tariffs are structured whether they can adapt to market developments ex post and whether contracts are signed before or after the investment takes place Generally many of these agreements allow for some extent of risk sharing offering the possibility of increasing investment incentives when firms are not risk neutral It is suggested that regulators consider introducing regulated co investment agreements complementing current regulation in addition to considering geographically segmented access prices The second chapter assesses entry and competition in local retail markets for newspapers It builds on the new empirical industrial organisation NEIO literature to estimate sustainable coverage and competitive effects of entry for Swiss newspaper sellers which sell composite goods newspapers food and other goods of daily use An entry threshold ratio methodology is used allowing for model estimation even when the range of products under examination is not

exactly defined and when price and quantity data are not available It is found that under duopoly prices the market size of a Commune required for single firm entry is about twice as large as under monopoly prices A clear and quantifiable trade off between competition and investment therefore exists Moreover it is found that while a second entrant in this market strongly increases competition further entry doesn't have a significant additional competitive effect From a welfare perspective therefore it can be stated that two is enough to ensure competition in this market In the third chapter competition and market strategies in the Swiss fixed telephony market are assessed A market model based on a generalised version of the traditional dominant firm competitive fringe model is developed Direct estimation of the incumbent's intertemporal residual demand function is performed by instrumenting the market price with incumbent specific cost shifting variables as well as other variables The concrete estimates show that residual retail demand for voice traffic is highly inelastic Such a level of elasticity is only compatible with a profit maximising incumbent in the case of largely competitive conduct It is therefore found that the Swiss incumbent acted largely competitively and that current regulated telephony retail price caps could not be justified on the basis of a lack of competition

The Economics of Competition in the Telecommunications Industry John Robert Meyer, 1979 *After the Breakup* Robert W. Crandall, 2010-12-01 The U S telecommunications industry has undergone dramatic changes in recent years that have touched almost every American home and business The average American can dial almost anywhere in the world directly store and forward a message or transmit a fax in less than a minute often for less than the real cost of a 500 mile telephone call twenty five years ago The combination of telecommunications breakthroughs competition among new and old carriers and the AT T breakup has transformed the telephone industry and provided customers with a new array of equipment and services Robert W Crandall examines the effects of the AT T breakup and weighs the costs and benefits to the residential and business consumer On balance he finds that the efficiency gains from opening up the telephone industry have more than offset the possible efficiency losses which may be caused by the sacrifice of economies of scale and scope or the absence of fully compatible equipment and services The replacement of regulation with competition has led to greater productivity in the telephone industry a more efficient rate structure and lower equipment prices Crandall traces the telecommunications evolution from its early beginnings as pairs of copper wires up through the historic 1982 decision to divest He investigates the impact of technological changes competition and the advent of divestiture on the quality of service local and interexchange service rates productive efficiency and income distribution He also focuses on problems that linger
