The Historic Development of Logic Federigo Enriques, 1929 *Beyond Shanghai and PISA* Binyan Xu, Yan Zhu, Xiaoli Lu, 2021-05-07 This book seeks to illustrate the research on mathematics competencies and disposition in China according to the conceptual development and empirical investigation perspective Mathematics education in China has a distinguishing feature a focus of attention to mathematical competency Paradoxically there has not been an explicit refined and measurable evaluation system in place to assess mathematical competency in China While academic achievement surveys or evaluations are common these can only give an overall conclusion about mathematical thinking skills or problem solving abilities In response to this deficiency China is beginning to carry out national projects that emphasize defining both a conceptual framework on core competencies in school mathematics and developing a corresponding assessment framework Thus the main focus of this volume is the current investigations of different mathematics competencies and mathematical disposition of Chinese students with the aim of

promoting interaction between domestic and international student performance assessment to provide a more comprehensive understanding of mathematics competencies and disposition in mainland China and to stimulate innovative new directions in research The primary audience of this volume is the large group of researchers interested in mathematics competencies mathematics teaching and learning in China or comparative studies or the relation of the three The book will also appeal to teaching trainers or instructors as well as be an appropriate resource for graduate courses or seminars at either the master s or doctoral level
