Complex Analytic Sets:

Complex Analytic Sets Evgeniĭ Mikhaĭlovich Chirka, 1985 Complex Analytic Sets E.M. Chirka, 2012-12-06 The theory of complex analytic sets is part of the modern geometrical theory of functions of several complex variables A wide circle of problems in multidimensional complex analysis related to holomorphic functions and maps can be reformulated in terms of analytic sets In these reformulations additional phenomena may emerge while for the proofs new methods are necessary As an example we can mention the boundary properties of conformal maps of domains in the plane which may be studied by means of the boundary properties of the graphs of such maps The theory of complex analytic sets is a relatively young branch of complex analysis Basically it was developed to fulfill the need of the theory of functions of several complex variables but for a long time its development was so to speak within the framework of algebraic geometry by analogy with algebraic sets And although at present the basic methods of the theory of analytic sets are related with analysis and geometry the foundations of the theory are expounded in the purely algebraic language of ideals in commutative algebras In the present book I have tried to eliminate this noncorrespondence and to give a geometric exposition of the foundations of the theory of complex analytic sets using only classical complex analysis and a minimum of algebra well known properties of polynomials of one variable Moreover it must of course be taken into consideration that algebraic geometry is one of the most important domains of application of the theory of analytic sets and hence a lot of attention is given in the present book to algebraic sets

Introduction to Complex Analytic Geometry Stanislaw Lojasiewicz, 2013-03-09 facts An elementary acquaintance with topology algebra and analysis including the notion of a manifold is sufficient as far as the understanding of this book is concerned All the necessary properties and theorems have been gathered in the preliminary chapters either with proofs or with references to standard and elementary textbooks The first chapter of the book is devoted to a study of the rings \mathcal{O}_a of holomorphic functions The notions of analytic sets and germs are introduced in the second chapter Its aim is to present elementary properties of these objects also in connection with ideals of the rings \mathcal{O}_a The case of principal germs 5 and one dimensional germs Puiseux theorem 6 are treated separately The main step towards understanding of the local structure of analytic sets is Ruckert's descriptive lemma proved in Chapter III Among its consequences is the important Hilbert Nullstellensatz 4 In the fourth chapter a study of local structure normal triples 1 is followed by an exposition of the basic properties of analytic sets The latter includes theorems on the set of singular points irreducibility and decomposition into irreducible branches 2 The role played by the ring \mathcal{O}_A of an analytic germ is shown 4 Then the Remmert Stein theorem on removable singularities is proved 6 The last part of the chapter deals with analytically constructible sets 7 *Lectures on Stratification of Complex Analytic Sets* Marie-Hélène Schwartz, 1966 **Introduction to the Theory of Analytic Spaces** Raghavan Narasimhan, 2006-11-14 **The Numerical Solution of Systems of Polynomials Arising in Engineering and Science** Andrew John Sommese, Charles Weldon Wampler (II.), 2005 Written by the founders of the new and expanding field

of numerical algebraic geometry this is the first book that uses an algebraic geometric approach to the numerical solution of polynomial systems and also the first one to treat numerical methods for finding positive dimensional solution sets The text covers the full theory from methods developed for isolated solutions in the 1980 s to the most recent research on positive dimensional sets

Ordered Algebraic Structures and Related Topics Fabrizio Broglia,2017 Contains the proceedings of the international conference Ordered Algebraic Structures and Related Topics held in October 2015 at CIRM Luminy Marseilles Papers cover topics in real analytic geometry real algebra and real algebraic geometry including complexity issues model theory of various algebraic and differential structures Witt equivalence of fields and the moment problem

Complex Analytic Geometry Gerd Fischer,2006-11-14

Geometry of Subanalytic and Semialgebraic Sets Masahiro Shiota,1997 Subanalytic and semialgebraic sets were introduced for topological and systematic investigations of real analytic and algebraic sets One of the author s purposes is to show that almost all known and unknown properties of subanalytic and semialgebraic sets follow abstractly from some fundamental axioms Another is to develop methods of proof that use finite processes instead of integration of vector fields The proofs are elementary but the results obtained are new and significant for example for singularity theorists and topologists Further the new methods and tools developed provide solid foundations for further research by model theorists logicians who are interested in applications of model theory to geometry A knowledge of basic topology is required

Complex Analytic Geometry: From The Localization Viewpoint Tatsuo Suwa,2024-02-21

Complex Analytic Geometry is a subject that could be termed in short as the study of the sets of common zeros of complex analytic functions It has a long history and is closely related to many other fields of Mathematics and Sciences where numerous applications have been found including a recent one in the Sato hyperfunction theory This book is concerned with among others local invariants that arise naturally in Complex Analytic Geometry and their relations with global invariants of the manifold or variety The idea is to look at them as residues associated with the localization of some characteristic classes Two approaches are taken for this topological and differential geometric and the combination of the two brings out further fruitful results For this on one hand we present detailed description of the Alexander duality in combinatorial topology On the

other hand we give a thorough presentation of the de Rham cohomology and integration theory on it This viewpoint provides us with the way for clearer and more precise presentations of the central concepts as well as fundamental and important results that have been treated only globally so far It also brings new perspectives into the subject and leads to further results and applications The book starts off with basic material and continues by introducing characteristic classes via both the obstruction theory and the Chern Weil theory explaining the idea of localization of characteristic classes and presenting the aforementioned invariants and relations in a unified way from this perspective Various related topics are also discussed The expositions are carried out in a self containing manner and includes recent developments The profound consequences of this subject will make the book useful for students and researchers in fields as diverse as Algebraic Geometry Complex Analytic Geometry Differential Geometry Topology Singularity Theory Complex Dynamical Systems Algebraic Analysis and Mathematical Physics

Fernando,2022-06-07 In the first two chapters we review the theory developed by Cartan Whitney and Tognoli Then Nullstellensatz is proved both for Stein algebras and for the algebra of real analytic functions on a \mathbb{C} analytic space Here we find a relation between real Nullstellensatz and seventeenth Hilbert s problem for positive semidefinite analytic functions Namely a positive answer to Hilbert s problem implies a solution for the real Nullstellensatz more similar to the one for real polynomials A chapter is devoted to the state of the art on this problem that is far from a complete answer In the last chapter we deal with inequalities We describe a class of semianalytic sets defined by countably many global real analytic functions that is stable under topological properties and under proper holomorphic maps between Stein spaces that verifies a direct image theorem A smaller class admits also a decomposition into irreducible components as it happens for semialgebraic sets During the redaction some proofs have been simplified with respect to the original ones
