Advanced LISP Technology Taiichi Yuasa, Hiroshi G. Okuno, 2002-05-09 Developments in Lisp technology have been accelerated by a number of factors including the increased interest in Artificial Intelligence and the emergence of Common Lisp Advanced Lisp Technology the fourth volume in the Advanced Information Processing Technology series brings together various Japanese researchers working in the field of Lisp to *Software Safety and Security* NATO Emerging Security Challenges Division, 2012 Recent decades have seen major advances in methods and tools for checking the safety and security of software systems Automatic tools can now detect security flaws not only in programs of the order of a million lines of code but also in high level protocol descriptions There has also been something of a breakthrough in the area of operating system verification This book presents the lectures from the NATO Advanced Study Institute on Tools for Analysis and Verification of Software Safety and Security a summer school held at Bayrischzell Germany in 2011 This Advanced Study Institute was divided into three integrated modules Foundations of Safety and Security Applications of Safety Analysis and Security Analysis Subjects covered include mechanized game based proofs of security protocols formal security proofs model checking using and building an automatic program verifier and a hands on introduction to interactive proofs Bringing together many leading international experts in the field this NATO Advanced Study Institute once more proved invaluable in facilitating the connections which will influence the quality of future research and the potential to transfer research into practice This book will be of interest to all those whose work depends on the safety and security of software systems

Compiler Construction Evelyn Duesterwald, 2004-02-20 The CC program committee is pleased to present this volume with the proceedings of the 13th International Conference on Compiler Construction CC 2004 CC continues to provide an exciting forum for researchers educators and practitioners to exchange ideas on the latest developments in compiler technology programming language implementation and language design The conference emphasizes practical and experimental work and invites contributions on methods and tools for all aspects of compiler technology and all language paradigms This volume serves as the permanent record of the 19 papers accepted for presentation at CC 2004 held in Barcelona Spain during April 12-14 2004 The 19 papers in this volume were selected from 58 submissions Each paper was assigned to three committee members for review The program committee met for one day in December 2003 to discuss the papers and the reviews By the end of the meeting a consensus emerged to accept the 19 papers presented in this volume However there were many other quality submissions that could not be accommodated in the program hopefully they will be published elsewhere The continued success of the CC conference series would not be possible without the help of the CC community I would like to gratefully acknowledge and thank all of the authors who submitted papers and the many external reviewers who wrote reviews

Compilation for Secure Multi-party Computation
Niklas Büscher, Stefan Katzenbeisser, 2017-11-16. This book presents a holistic view on compiler-assisted practical secure multi-party computation (MPC) over Boolean circuits. It discusses that two or more parties jointly evaluate a function over their inputs in such a way that each party keeps its input unknown to the other parties in MPC. MPC provides a generic way to construct Privacy-Enhancing Technologies which protect sensitive data during processing steps in untrusted environments. A major obstacle in the past was to generate MPC applications by hand. Recently, special compilers have been developed to build all kinds of applications. This book also explains in detail how efficient MPC applications can be created automatically from ANSI C, thus bridging the areas of cryptography, compilation and hardware synthesis. It also gives an insight into the requirements for creating efficient applications for MPC and is hence of interest to not only researchers in the area of MPC but also developers realizing practical applications with MPC. For a better understanding of the complete compile chain from ANSI C to circuits which is the machine code of MPC, the authors first give the necessary background information on MPC protocols, Boolean logic and logic synthesis. Then the authors describe the various compilation steps required to translate any code into an adequate circuit description. Afterwards, the authors introduce a variety of optimization techniques for two classes of MPC protocols, namely techniques that improve the runtime of applications in constant and multi-round MPC protocols. The authors also illustrate how efficient parallelization of MPC protocols can be achieved using the assistance of compilers. It presents the effectiveness of the proposed techniques by giving a detailed evaluation on benchmarking applications. Most of the aforementioned techniques are implemented in our open-source compiler that is accompanying this book and allows to study compilation for MPC in practice. Researchers who are interested in practical secure multi-party computation (MPC) and developers who are interested in realizing MPC applications in practice will find this book useful as a reference as well as advanced-level students in computer science.
