Apoptosis And The Immune System:

Apoptosis and the Immune System Christopher D. Gregory, 1995-03-02 By offering a broad range of views Apoptosis and the Immune Response presents a current and complete picture of the various aspects and consequences of this phenomenon Cell Death Regulation in Pathology, 2025-09-24 Regulated cell death RCD stands at the crossroads of cellular integrity and disease orchestrating essential processes that preserve tissue homeostasis guide development and dictate responses to stress Far from being a passive consequence of damage RCD is an actively regulated and highly conserved mechanism one whose dysregulation fuels the pathogenesis of cancer chronic inflammation neurodegenerative diseases and muscular atrophy Apoptosis the classical and best characterized form of RCD ensures the silent clearance of compromised cells Yet its evasion of malignancies has propelled a paradigm shift toward uncovering non apoptotic death modalities Ferroptosis driven by iron dependent lipid peroxidation has emerged as a potent vulnerability in apoptosis resistant cancers such as acute myeloid leukemia with p53 serving as a critical modulator of this process Meanwhile the recent identification of cuproptosis triggered by intracellular copper accumulation has opened new investigative avenues in disorders such as skeletal muscle atrophy highlighting the pathological relevance of metal dyshomeostasis RCD is not an isolated event it profoundly shapes and is shaped by the immune landscape Innate sensors such as NLRs dictate inflammasome activation and the immunogenic profile of dying cells influencing disease tolerance and immune surveillance Central transcription factors including MYC and p53 act as master integrators of death and proliferation signals Heat shock proteins particularly HSP70 safeguard cancer stem cell survival and modulate apoptotic thresholds From a translational perspective targeting RCD pathways represents a high value strategy across disease domains In cancer combining radiotherapy with ferroptosis inducers offers new hope against resistance In neurology modulating the endocannabinoid system and autophagy may confer neuroprotection Mitochondrial dysfunction at the core of multiple RCD forms underscores the centrality of metabolic control in cell fate RCD is not merely a biological endpoint it is a therapeutic frontier

Biotechnology David P. Clark, Nanette J. Pazdernik, 2010-07-21 Unlike most biotechnology textbooks Dr David P Clark s Biotechnology approaches modern biotechnology from a molecular basis which grew out of the increasing biochemical understanding of physiology Using straightforward less technical jargon Clark manages to introduce each chapter with a basic concept that ultimately evolves into a more specific detailed principle This up to date text covers a wide realm of topics including forensics and bioethics using colorful illustrations and concise applications This book will help readers understand molecular biotechnology as a scientific discipline how the research in this area is conducted and how this technology may impact the future Up to date text focuses on modern biotechnology with a molecular foundation Basic concepts followed by more detailed specific applications Clear color illustrations of key topics and concepts Clearly written without overly technical jargon or complicated examples *Epigenetic Contributions in Autoimmune Disease* Esteban Ballestar, 2011-02-16

This volume focuses on the relevance of epigenetic mechanisms in autoimmune disease. It provides new directions for future research in autoimmune disease. Apoptosis in Immunology Guido Kroemer, Carlos Martinez-A., 2012-12-06. In any movement of their life immune cells especially T and B lymphocytes are confronted with an essential choice to continue their existence or to commit a sort of metabolic suicide that is referred to as apoptosis or programmed cell death. In contrast to most philosophers lymphocytes and their precursors are constantly susceptible to suicide and it even appears that the usual cause of T or B cell elimination is suicide rather than death from natural causes accidents or murder. This book provides a vast overview of lymphocyte suicide external triggers and internal motives leading to suicidal impulses accomplices in self destruction weapons implicated in self execution removal of dead bodies and pharmacological prevention of suicide. Most of the chapters in this book are devoted to the physiology of apoptosis. The goal is to unmask the external triggers of apoptosis unravel the signal transduction processes involved therein and describe the role of oncogenes death genes and effector molecules in the apoptotic cascade. The remaining chapters deal with the pathophysiological aspects of lymphocyte apoptosis namely as a host contribution to HIV induced lymphopenia and therapeutic strategies for the avoidance of lymphocyte death. We are confident that this compendium will contribute to the exploration of cellular suicide not only from a basic scientist's viewpoint but also with regard to the possible clinical implications of apoptosis dysregulation. Far from having a depressing effect on the reader cellular suicide may thus provide a source of both intellectual excitement and therapeutic inspiration.

Biochemistry and Cell Biology, 1994 Apoptosis and Its Relevance to Autoimmunity Keith B.

Elkon, A.N. Theofilopoulos, 2006 Over the last 15 years apoptosis has become a dominant focus of medical research in the field of immunology This publication discusses the three major areas of apoptosis research extrinsic death receptor pathways intrinsic cell death pathways and the mechanisms responsible for apoptotic cell clearance Each section delineates the proteins and signal transduction pathways and describes genetic alterations that lead to autoimmune diseases Although most cell death abnormalities have been associated with systemic autoimmune disorders such as lupus erythematosus and lymphoproliferative syndromes it is evident that regulation of cell death is also pertinent to disease expression in many organ specific diseases such as rheumatoid arthritis and glomerulonephritis This volume highlights the recent advances in the basic mechanisms of apoptosis and the application of that knowledge to understanding the impact of defective apoptosis or defective clearance of apoptotic cells on the immune function and the expression of disease It is of special interest to cell biologists immunologists and clinicians

Chemical Abstracts, 2002 Mechanisms of Lymphocyte Activation and Immune Regulation VI Sudhir Gupta, J. John Cohen, 2013-06-29 Since programmed cell death was first described in insects in 1964 and apoptosis was described in 1972 rapid progress has been made in understanding the basic mechanisms and genes regulating programmed cell death and apoptosis In addition defects in various genes regulating programmed cell death have been delineated in several experimental models of human diseases This volume surveys various aspects of these rapidly developing areas of research in programmed cell death apoptosis This volume should be of interest to basic immunologists and molecular biologists The volume begins with a historical perspective of cell death The remainder of the volume is divided into four different parts Part I deals with the signaling pathways in apoptosis including cell cycle control of apoptosis role of ceramide in apoptosis role of antibody signaling and biochemical regulation of apoptosis The mechanisms for recognition of apoptotic lymphocytes by macrophages are also reviewed Part II examines the role of various genes that regulate apoptosis including the role of Fas FasL and other TNF family members in apoptosis and homeostatic regulation of immune response Recently described splice variants and their influence on apoptosis are also reviewed and the role of the members of the Bcl 2 family in apoptosis is discussed in detail Part III reviews various aspects of apoptosis in B lymphocytes including mechanisms that regulate apoptosis survival of B lymphocytes and the regulation of Fas mediated apoptosis in B lymphocytes
