## **Application Science For Multiagent Systems:**

An Application Science for Multi-Agent Systems Thomas A. Wagner, 2006-04-11 An Application Science For Multi Agent Systems addresses the complexity of choosing which multi agent control technologies are appropriate for a given problem domain or a given application Without such knowledge when faced with a new application domain agent developers must rely on past experience and intuition to determine whether a multi agent system is the right approach and if so how to structure the agents how to decompose the problem and how to coordinate the activities of the agents and so forth This unique collection of contributions written by leading international researchers in the agent community provides valuable insight into the issues of deciding which technique to apply and when it is appropriate to use them The contributions also discuss potential trade offs or caveats involved with each decision An Application Science For Multi Agent Systems is an excellent reference for anyone involved in developing multi agent systems

**Iterative Software Engineering for Multiagent Systems** Jürgen Lind,2003-06-29 The agent metaphor and the agent based approach to systems design constitute a promising new paradigm for building complex distributed systems However until now the majority of the agent based applications available have been built by researchers who specialize in agent based computing and distributed artificial intelligence If agent based computing is to become anything more than a niche technology practiced by the few then the base of people who can successfully apply the approach needs to be broadened dramatically A major step in this broadening endeavor is the development of methodologies for agent oriented software engineering accessible to and attractive for professional software engineers in their daily work Against this background this book presents one of the first coherent attempts to develop such a methodology for a broad class of agent based systems The author provides a clear introduction to the key issues in the field of agent oriented software engineering
