Action and Self-Development Jochen Brandtstadter, Richard M. Lerner, 1999-08-24

This volume presents the reader with a stimulating rich tapestry of essays exploring the nature of action and intentionality and discussing their role in human development. As the contributions make clear, action is an integrative concept that forms the bridge between our psychological, biological, and sociocultural worlds. Action is also integrative in the sense of entailing motivational, emotional, and cognitive systems, and this integration too is well represented in the chapters. Action is defined and distinguished from behavior according to its intentional quality. Thus, a constantly recurring theme in the volume involves the dialectic of action, intentionality, and specifically the questions of how and when these concepts are to be distinguished. For action theorists, action as distinguished from behavior constitutes the fundamental mechanism of human development. This commitment is detailed in several essays that explore the life span implications of action. This timely volume will be must reading for all who want to learn about or stay current with contemporary action theoretical approaches to human development.

Willis F. Overton, Temple University. The present volume advances the view that we cannot go far in understanding development over the life span without paying heed to self-reflective processes. In a reciprocal way, self-reflection links developmental change in the ways in which the person constructs his or her own development over the life span. Development, action, and intentionality exist then in an intimate relationship. As development forms the social and historical settings within which intentional activity is embedded, thus become indispensable categories for developmental theory and research. Due to their potential to integrate culture, history, and personality, action theoretical concepts have made strong inroads in many areas of social and behavioral research. Within the field of developmental psychology, researchers have come to recognize that developmental patterns and their variation across historical and social contexts cannot easily be reduced to invariant laws. Instead, they reflect the agency of both the culture and the person. Issues of intentional self-development gain particular importance within the developmental settings of modernity. Under conditions of cultural acceleration, globalization, and pluralization of life forms, normative scripts and timetables of development have become blurred, and people are increasingly forced to take a planful, self-monitoring, and optimizing stance toward their own behavior and development. As will become evident throughout this ground-breaking book, an action perspective on development covers a broad spectrum of theoretical approaches. Concepts such as personal goals, personal projects, life themes, meaning, life planning, compensation, or intentional self-development have become the nuclei of innovative research programs. The chapters collected in this volume by scholars on the forefront of action theory and research provide an indication of the promise that these notions hold for life span developmental psychology, motivation research, and research on aging.

Lifespan Developmental Systems Ellen A. Skinner, Thomas Kindermann, Andrew Mashburn, 2019-05-09 Everything you always wanted to know about theories, meta-theories, methods, and interventions but didn't realize you needed to ask. This innovative textbook takes advanced undergraduate and graduate students behind the curtain of standard developmental science so they can begin to appreciate the generative value and methodological challenges of a lifespan developmental systems perspective. It envisions applied developmental science as focused on ways to use knowledge about human development to help solve societal problems in real-life contexts and considers applied developmental research to be purpose-driven, field-based, community-engaged, and oriented toward efforts to optimize development. Based on the authors' more than 25 years of teaching, this text is designed to help researchers and their students intentionally create a cooperative learning community full of arguments, doubts, and insights that can facilitate their own internal paradigm shifts, one student at a time. With the aid of extensive online supplementary materials, students of developmental psychology as well as students in other psychological subdisciplines such as industrial, organizational, social, and community psychology, and applied professions that rely on developmental training such as education, social work, counseling, nursing, health care, and business will find this to be an invaluable guidebook and toolbox for conceptualizing and studying applied problems from a lifespan developmental systems perspective.
