

Here is a technique that has reproducible results. If the mother's blood pressure is high during pregnancy, you can consistently bring it down; if the baby isn't growing properly in the womb, you can get it to grow in almost every case; if the baby is distressed in labor and thus endangered, you can reverse the distress and dispel the danger; when you use decompression prophylactically, you don't get any distress; when you use it through pregnancy, you don't get babies with cerebral palsy. These benefits are all highly reproducible and statistically provable. Ultimately, I believe that it will be scientifically demonstrated that the intellectual quality of the baby is also consistently improved by decompression. Most important at the present time, however, is the fact that women with long histories of fetal wastage (miscarriage) give birth to live healthy babies for the first time as a direct result of abdominal decompression.
