Decision-making for New Product Development in Small Businesses Mary Haropoulou,Clive Smallman,2018-12-07 What goes on in a small firm that lives or dies by its capacity to innovate How are decisions made on new product development and how does that feed into the ecological social and financial sustainability of the firm This book answers the questions through an in depth look at a small business that manufactures high end carpet yarn Using advanced analytical techniques to interrogate rich qualitative data the book draws together established theories of decision making and new product development coupled with thinking about business sustainability to improve our understanding of this important area of business practice The book further reinforces the importance and role of organizational learning in organizational decision making based on novel analysis of empirically developed qualitative data

The Oxford Handbook of Deaf Studies in Learning and Cognition Marc Marschark,Harry Knoors,2020-04-15 In recent years the intersection of cognitive psychology developmental psychology and neuroscience with regard to deaf individuals has received increasing attention from a variety of academic and educational audiences Both research and pedagogy have addressed questions about whether deaf children learn in the same ways that hearing children learn how signed languages and spoken languages might affect different aspects of cognition and cognitive development and the ways in which hearing loss influences how the brain processes and retains information There are now a number of preliminary answers to these questions but there has been no single forum in which research into learning and cognition is brought together The Oxford Handbook of Deaf Studies in Learning and Cognition aims to provide this shared forum focusing exclusively on learning cognition and cognitive development from theoretical psychological biological linguistic social emotional and educational perspectives Each chapter

includes state of the art research conducted and reviewed by international experts in the area Drawing this research together this volume allows for a synergy of ideas that possesses the potential to move research theory and practice forward

Directory of Federal Laboratory and Technology Resources ,1994 Describes the individual capabilities of each of 1 900 unique resources in the federal laboratory system and provides the name and phone number of each contact Includes government laboratories research centers testing facilities and special technology information centers Also includes a list of all federal laboratory technology transfer offices Organized into 72 subject areas Detailed indices *New Perspectives on Human Development* Nancy Budwig, Elliot Turiel, Philip David Zelazo, 2017-04-17 Developmental theorists have struggled with defining the relations among biology psychology and sociocultural context often reducing psychological functions of a person to either biological functioning or the role of sociocultural context nature or nurture and considering each area of human development separately *New Perspectives on Human Development* addresses fundamental questions of development with a unified approach It encompasses theory and research on cognitive social and moral and language and communicative development in various stages of life and explores interdisciplinary perspectives *New Perspectives on Human Development* revisits old questions and applies original empirical findings offering new directions for future research in the field **The Neuron in Context** Vanessa Lux, 2024-09-17 Neuroscience has largely abandoned its localizationist and mechanistic framework of the 20th century The plastic embodied and network character of our nervous system is widely acknowledged and systems theory approaches to consciousness dominate the field However the underlying neuron theory has not changed The neuron doctrine conceptualizing the single neuron as atomistic one directional source of neural function still provides the template for our understanding of these basic elements of our nervous system and the material foundation of consciousness Yet the single neuron does not exist as an isolated unit It is embedded within multiple cellular structural and functional contexts and highly depends on them for its development neural activity and survival The book discusses the constraints of the neuron doctrine and its pragmatic reductionism in the light of the growing knowledge about the brain s connectivity plasticity and systemic and embodied nature To overcome these constraints the author argues for a new neuron theory depicting the neuron as bidirectional hub which is at the same time source and product of neural function This bidirectionality is further characterized by spatial and time dimensions placing the neuron within a multi level pathway model of psychobiological development from the perspective of Developmental Embodiment Research Furthermore the author discusses the potential of neuroepigenetic markers to characterize the neuron and its range of plasticity within this developmental perspective With its focus on neuroepigenetics the book addresses a knowledge gap in the current study of the neural foundations of psychological functions The multi level and bidirectional perspective is already realized in approaches coming from developmental systems theory which model neural function at the connectome level and it also fits with approaches investigating feedback loops underlying neural activity at the single cell level At both these levels the spatial

and the time dimensions are well characterized either as changing connectivity patterns across different age groups or as synaptic feedback loops underlying neural activation patterns. However, for the intermediate level of small neural populations, which is currently the main target for studies investigating the neural basis of specific psychological functions, this characterization turned out to be more challenging. Multi-cell recordings have provided a first glimpse into the complex interaction patterns of these small neural networks, but they are limited to the recording period and do not provide information about the long-term developmental and activation history. Here, neuroepigenetic markers could be of use. Due to their relative stability and at the same time environmental sensitivity, neuroepigenetic markers represent an additional layer of information in which, to a certain degree, the cell's metabolic and activation history is aggregated over time. This information is available at the single neuron level but could also be modeled as aggregated information for small neural populations and the supporting cellular context. Looking through this epigenetic lens adds to our understanding of the neuron as a bidirectional hub by emphasizing the molecular correlates of functional stabilization and their contextual prerequisites. These prerequisites reach from the immediate cellular context to the social-cultural contexts which shape the culturally specific modes of acquisition of psychological functions throughout the lifespan. Accounting for this multilayered contextuality of the neuron and its function affords to reposition the relationship between neuroscience and psychology in their joint effort to unravel the material basis of consciousness. This provides new challenges but also new perspectives for theoretical psychology. The book presents these current developments and debates to researchers, graduate students, and interested professionals and practitioners working in neuroscience, epigenetics, psychiatry, psychology, and psychotherapy. It also provides a basic introduction into neuroepigenetics, its mechanisms, and first findings for graduate students as well as interested professionals and practitioners working in psychiatry, psychology, and psychotherapy.

Human Resource Forecasting and Strategy Development Manuel London, Emily S. Bassman, John P. Fernandez, 1990-09-07

A collection of original articles by leading practitioners and researchers. This volume examines methods for human resource forecasting and planning to meet the strategic needs of the organization. As the editors note at the outset, changing characteristics of the workforce and new skill demands mean that human resource planning must become an integral part of corporate strategy development and implementation. In order to compete successfully in an era of rapid technological change, organizations must be able to adequately forecast their needs for different types of employees, consider the extent to which current employees have the needed skills, and examine labor force availability. This book describes ways to collect the necessary environmental data and formulate human resource strategies that recognize current and anticipated changes both in the organization and in the environment in which it

operates The volume begins with a discussion of environmental scanning techniques The contributors demonstrate how to identify environmental trends including labor force demographics and how to apply this information to the development of human resource strategies The second section considers ways to analyze the organization s future human resource needs by examining employee demographics and job attitudes In Part Three the contributors describe how organizations formulate human resource strategies in response to environmental trends and organizational goals The next group of chapters offers examples of the human resource implications of organizational change This section includes separate chapters on job loss and employee assistance programs and the effects of a corporate merger as well as two case studies of the relationship between human resource planning and corporate strategic goals The contributors conclude by describing organizational reactions to changing environments brought about by an aging workforce work at home jobs new computer and telecommunications technologies and the increasing cultural diversity of the workforce Indispensable for human resource managers and corporate planning executives this book will also be of significant value to researchers and students in human resource and strategic planning programs
