Brain Function In Hot Environment:

Brain Function in Hot Environment Hari Shanker Sharma, Jan Westman, 1998 Hardbound Although problems relating to hyperthermia and heat stroke are well known since biblical times until now the influence of heat or hyperthermia on the central nervous system has not been well documented This book is the first to describe in detail the influences of hyperthermia on the CNS using the modern technology which has developed in the last 50 years in neuroscience Hyperthermia is a common feature during fever radiotherapy of tumours and exercise in hot environment Statistically hyperthermia and or heat stroke is currently recognised as the third largest killer in America after head and spinal trauma and heart failure However studies on the mechanisms of heat induced death or damage to the CNS are still lacking This book aims to define the probable mechanisms of brain damage in hyperthermia which could be responsible for death of victims

complete descriptions of the many facets of the most physiological responses from a cellular to an integrative approach within individual body systems in normal and disease states and includes some chapters that are rarely addressed in exercise physiology books such as the influence of exercise on endothelium vasomotor control mechanisms coagulation immune function and rheological properties of blood and their influence on hemodynamics This book represents the first iteration to provide such a work Normal exercise responses divided into muscle function bioenergetics and respiratory cardiac and blood vascular function Fitness training exercise testing and limits to exercise Exercise responses in different environments Beneficial effects of exercise rehabilitation on ageing and in the prevention and treatment of disease states Rarely addressed issues such as the influence of exercise on endothelium vasomotor control mechanisms coagulation immune function and rheological properties of blood and their influence on hemodynamics

Thermotherapy for Neoplasia, Inflammation, and Pain M. Kosaka, T. Sugahara, K.L. Schmidt, E. Simon, 2013-04-17 This book provides a comprehensive overview of the multitude of different forms of thermotherapy in connection with aspects of thermal physiology and cell biology The aim is to elucidate the scientific background of therapeutic actions and to promote effective new applications at the beginning of the 21st century Significant to these purposes is cooperation between experts in the fields of thermal biology hyper thermic oncology rheumatology and balneology as represented by the editors Emphasis has been placed on a balanced choice of contributions in the hope that this will enable the reader to draw helpful connections between the principles and practice of thermotherapy It is apparent that a wealth of published data exists concerning thermotherapy on the one hand and thermal physiology on the other However in the former field empirical aspects of therapeutic usefulness prevail while in the latter aspects of basic science are in the foreground Accordingly the sources where published data may be found are quite different and as a consequence many findings of potential mutual interest published in medical journals have gone unnoticed by readers of physiological journals and vice versa It is hoped that this book will bridge the gap and encourage researchers efforts to integrate the available knowledge to attain optimal coordination of clinical and theoretical aspects
