

The Client/Server Model

- **Client/Server**—how different types of software running on network devices interact
 - Examples
 - When you go to a website, your browser software (**client**) requests Web pages from the site's Web server software (**server**)
 - You can download a file from an Internet server by using an **FTP** (file transfer protocol) **client** that requests the file from a **server** running **FTP** software (part of the TCP/IP protocol suite)
- An application can be both a **client** and a **server**
 - One time requesting services and another time providing them

This is common in
peer-to-peer networks
