TensorFlow 2.0 Computer Vision Cookbook Jesus Martinez, 2021-02-26 Get well versed with state of the art techniques to tailor training processes and boost the performance of computer vision models using machine learning and deep learning techniques

Key Features Develop train and use deep learning algorithms for computer vision tasks using TensorFlow 2 x Discover practical recipes to overcome various challenges faced while building computer vision models Enable machines to gain a human level understanding to recognize and analyze digital images and videos

Book Description Computer vision is a scientific field that enables machines to identify and process digital images and videos This book focuses on independent recipes to help you perform various computer vision tasks using TensorFlow The book begins by taking you through the basics of deep learning for computer vision along with covering TensorFlow 2 x s key features such as the Keras and tf data Dataset APIs You ll then learn about the ins and outs of common computer vision tasks such as image classification transfer learning image enhancing and styling and object detection The book also covers autoencoders in domains such as inverse image search indexes and image denoising while offering insights into various architectures used in the recipes such as convolutional neural networks CNNs region based CNNs R CNNs VGGNet and You Only Look Once YOLO

Moving on you ll discover tips and tricks to solve any problems faced while building various computer vision applications Finally you ll delve into more advanced topics such as Generative Adversarial Networks GANs video processing and AutoML concluding with a section focused on techniques to help you boost the performance of your networks By the end of this TensorFlow book you ll be able to confidently tackle a wide range of computer vision problems using TensorFlow 2 x

What you will learn Understand how to detect objects using state of the art models such as YOLOv3 Use AutoML to predict gender and age from images Segment images using different approaches such as FCNs and generative models Learn how to improve your network s performance using rank N accuracy label smoothing and test time augmentation Enable machines to recognize people s emotions in videos and real time streams Access and reuse advanced TensorFlow Hub models to perform image classification and object detection Generate captions for images using CNNs and RNNs

Who this book is for This book

is for computer vision developers and engineers as well as deep learning practitioners looking for go to solutions to various problems that commonly arise in computer vision You will discover how to employ modern machine learning ML techniques and deep learning architectures to perform a plethora of computer vision tasks Basic knowledge of Python programming and computer vision is required **Neural Networks with Keras Cookbook** V Kishore Ayyadevara,2019-02-28 Implement neural network architectures by building them from scratch for multiple real world applications Key FeaturesFrom scratch build multiple neural network architectures such as CNN RNN LSTM in KerasDiscover tips and tricks for designing a robust neural network to solve real world problemsGraduate from understanding the working details of neural networks and master the art of fine tuning themBook Description This book will take you from the basics of neural networks to advanced implementations of architectures using a recipe based approach We will learn about how neural networks work and the impact of various hyper parameters on a network s accuracy along with leveraging neural networks for structured and unstructured data Later we will learn how to classify and detect objects in images We will also learn to use transfer learning for multiple applications including a self driving car using Convolutional Neural Networks We will generate images while leveraging GANs and also by performing image encoding Additionally we will perform text analysis using word vector based techniques Later we will use Recurrent Neural Networks and LSTM to implement chatbot and Machine Translation systems Finally you will learn about transcribing images audio and generating captions and also use Deep Q learning to build an agent that plays Space Invaders game By the end of this book you will have developed the skills to choose and customize multiple neural network architectures for various deep learning problems you might encounter What you will learnBuild multiple advanced neural network architectures from scratchExplore transfer learning to perform object detection and classificationBuild self driving car applications using instance and semantic segmentationUnderstand data encoding for image text and recommender systemsImplement text analysis using sequence to sequence learningLeverage a combination of CNN and RNN to perform end to end learningBuild agents to play games using deep Q learningWho this book is for This intermediate level book targets beginners and intermediate level machine learning practitioners and data scientists who have just started their journey with neural networks This book is for those who are looking for resources to help them navigate through the various neural network architectures you ll build multiple architectures with concomitant case studies ordered by the complexity of the problem A basic understanding of Python programming and a familiarity with basic machine learning are all you need to get started with this book **Binary Analysis Cookbook** Michael Born,2019-09-20 Explore open source Linux tools and advanced binary analysis techniques to analyze malware identify vulnerabilities in code and mitigate information security risks Key FeaturesAdopt a methodological approach to binary ELF analysis on LinuxLearn how to disassemble binaries and understand disassembled codeDiscover how and when to patch a malicious binary during analysisBook Description Binary analysis is the process of examining a binary program to determine information security

actions It is a complex constantly evolving and challenging topic that crosses over into several domains of information technology and security This binary analysis book is designed to help you get started with the basics before gradually advancing to challenging topics Using a recipe based approach this book guides you through building a lab of virtual machines and installing tools to analyze binaries effectively You ll begin by learning about the IA32 and ELF32 as well as IA64 and ELF64 specifications The book will then guide you in developing a methodology and exploring a variety of tools for Linux binary analysis As you advance you ll learn how to analyze malicious 32 bit and 64 bit binaries and identify vulnerabilities You ll even examine obfuscation and anti analysis techniques analyze polymorphed malicious binaries and get a high level overview of dynamic taint analysis and binary instrumentation concepts By the end of the book you ll have gained comprehensive insights into binary analysis concepts and have developed the foundational skills to confidently delve into the realm of binary analysis What you will learn

Traverse the IA32 IA64 and ELF specifications
Explore Linux tools to disassemble ELF binaries
Identify vulnerabilities in 32 bit and 64 bit binaries
Discover actionable solutions to overcome the limitations in analyzing ELF binaries
Interpret the output of Linux tools to identify security risks in binaries
Understand how dynamic taint analysis works

Who this book is for This book is for anyone looking to learn how to dissect ELF binaries using open source tools available in Linux If you re a Linux system administrator or information security professional you ll find this guide useful Basic knowledge of Linux familiarity with virtualization technologies and the working of network sockets and experience in basic Python or Bash scripting will assist you with understanding the concepts in this book
