Child and Adolescent Psychiatry in Europe Helmut Remschmidt,Herman van Engeland,2012-12-06 The intention of this book is to provide an overview of child and adolescent psychiatry in Europe focusing on the historical development current situation and future perspectives of the specialty Child and adolescent psychiatry is now acknowledged as a medical specialty or subspecialty in almost all European countries Also the number of child psychia trists has increased dramatically over the last decade However there are still enormous differences from country to country not only with regard to the num ber of specialists but also with regard to the extent and nature of services provided and their diagnostic and therapeutic orientation Furthermore important differ ences exist in the training curricula for child and adolescent psychiatry within medicine and other professional fields both inside and outside the universities and

in the image and importance of this discipline to the public This diversity is also reflected in the reports on the historical development current situation and future perspectives of child and adolescent psychiatry in 31 European countries all following the same structure in order to facilitate comparability This structure comprises 1 the historical development and the current situation 2 classification systems and diagnostic and therapeutic methods 3 structure and organization of services 4 cooperation with other medical and non medical disciplines 5 training and continuing medical education 6 research and 7 future perspectives

American Book Publishing Record ,1997-05 **Monographic Series** Library of Congress,1978 **Controlling Illegal Drugs** Sandro Segre, This study presents and compares the drug policies in use in the United States Sweden and Italy to limit the use and abuse of substances such as marijuana hashish cocaine heroin and amphetamines It also focuses on attempts to suppress the traffic in these drugs A primary objective of Segre s work is theoretical to evaluate and explain by means of a comparative method applied to the study of individual cases the respective level of success of these policies measured according to conventional criteria The aim of this comparison between Swedish drug policies a positive case and U S and Italian policies negative cases is to evaluate the effect of these policies on drug use Segre comes to the general conclusion that there is a causal relationship between drug use and drug control This is deduced from the association between Swedish policies and the limited diffusion of narcotics in Sweden on the one hand and from the association between U S and Italian policies and the wide diffusion of these substances in the United States and in Italy on the other hand This study does not aim to give a complete explanation of the high or low use of narcotics But what Segre does say is that the level of drug consumption could be a consequence of other causes which are considered here not as independent variables but on the contrary as intervening variables The literature in this field needs to dwell particularly on social and psychological causes Examples are the influence of parents and peers attitudes toward the use of drugs or abstention from them the positive or negative images that persons have of themselves and the possibility or rather the difficulty of establishing significant forms of interpersonal communication This is a modest serious contribution to the vexing issue of the causes of drug use in advanced societies
