Deadlock Resolution In Computer Integrated Systems:

Deadlock Resolution in Computer-Integrated Systems MengChu Zhou, Maria Pia Fanti, 2018-10-08 Complex computer integrated systems offer enormous benefits across a wide array of applications including automated production transportation concurrent software and computer operating systems computer networks distributed database systems and many other automated systems Yet as these systems become more complex automated distributed and computing intensive the opportunity for deadlock issues rises exponentially Deadlock modeling detection avoidance and recovery are critical to improving system performance Deadlock Resolution in Computer Integrated Systems is the first text to summarize and comprehensively treat this issue in a systematic manner Consisting of contributions from prominent researchers in the field this book addresses deadlock free models and scheduling detection and recovery methods the formulation of dynamic control policies and comparison and industrial benchmark studies that evaluate various approaches The editors lay the foundation for exploring deadlock issues with a typical example of an automated manufacturing process illustrating three primary modeling methods digraphs Petri nets and automata and comparing their respective advantages and disadvantages Providing all of the important models and resolution approaches this book is the complete guide for electrical and control engineers and manufacturing intelligent and network systems designers to prevent and manage deadlock issues in their systems

Special Issue on Deadlock Resolution in Computer-integrated Systems MengChu Zhou, Mu Der Jeng, Maria Pia Fanti, 2004

Optimal Supervisory Control of Automated Manufacturing Systems Yufeng Chen, Zhiwu Li, 2013-01-23 This monograph presents the state of the art developments in the design of behaviorally and structurally optimal liveness forcing Petri net supervisors with computationally tractable approaches It details optimal supervisory control problems arising in automated production systems and outlines a methodology to achieve the optimality purposes of deadlock prevention via converting a variety of problems under consideration into integer linear programming models The book includes a reference bibliography at the end of each chapter and a complete index

System Modeling and Control with Resource-Oriented Petri Nets MengChu Zhou, Naiqi Wu, 2018-09-03 Petri nets are widely used in modeling analysis and control of discrete event systems arising from manufacturing transportation computer and communication networks and web service systems However Petri net models for practical systems can be very large making it difficult to apply such models to real life problems System Modeling and Control with Resource Oriented Petri Nets introduces a new resource oriented Petri net ROPN model that was developed by the authors Not only does it successfully reduce model size but it also offers improvements that facilitate effective modeling analysis and control of automated and reconfigurable manufacturing systems Presenting the latest research in this novel approach this cutting edge volume provides proven theories and methodologies for implementing cost and time saving improvements to contemporary manufacturing systems It provides effective tools for deadlock avoidance deadlock free routing and deadlock free scheduling The authors supply simple and complex industrial manufacturing system

examples to illustrate time tested concepts theories and approaches for solving real life application problems Written in a clear and concise manner the text covers applications to automated and reconfigurable manufacturing systems automated guided vehicle AGV systems semiconductor manufacturing systems and flexible assembly systems Explaining complex concepts in a manner that is easy to understand the authors provide the understanding and tools needed for more effective modeling analysis performance evaluation control and scheduling of engineering processes that will lead to more flexible and efficient manufacturing systems
