Value Functions on Simple Algebras, and Associated Graded Rings Jean-Pierre Tignol, Adrian R. Wadsworth, 2015-04-03 This monograph is the first book length treatment of valuation theory on finite dimensional division algebras a subject of active and substantial research over the last forty years Its development was spurred in the last decades of the twentieth century by important advances such as Amitsur's construction of non crossed products and Platonov's solution of the Tannaka Artin problem This study is particularly timely because it approaches the subject from the perspective of associated graded structures This new approach has been developed by the authors in the last few years and has significantly clarified the theory Various constructions of division algebras are obtained as applications of the theory such as noncrossed products and indecomposable algebras In addition the use of valuation theory in reduced Whitehead group calculations after Hazrat and Wadsworth and in essential dimension computations after Baek and Merkurjev is showcased The intended audience consists of graduate students and research mathematicians

Simple Lie Algebras Over Fields of Positive Characteristic: Structure theory Helmut Strade, 2004 The problem of classifying the finite dimensional simple Lie algebras over fields of characteristic $p > 0$ is a long standing one Work on this question during the last 45 years has been directed by the Kostrikin Shafarevich Conjecture of 1966 which states that over an algebraically closed field of characteristic $p > 5$ a finite dimensional restricted simple Lie algebra is classical or of Cartan type This conjecture was proved for $p > 7$ by Block and Wilson in 1988 The generalization of the Kostrikin Shafarevich Conjecture for the general case of not necessarily restricted Lie algebras and $p > 7$ was announced in 1991 by Strade and Wilson and eventually proved by Strade in 1998 The final Block Wilson Strade Premet Classification Theorem is a landmark result of modern mathematics and can be formulated as follows Every finite dimensional simple Lie algebra over an algebraically closed field of characteristic $p > 3$ is of classical Cartan or Melikian type In the three volume book the author is assembling the proof of the Classification Theorem with explanations and references The goal is a state of the art account on the structure and classification theory of Lie algebras over fields of positive characteristic leading to the forefront of current research in this field This first volume is devoted to preparing the ground for the classification work to be performed in the second and third volume The concise presentation of the general theory underlying the subject matter and the presentation of classification results on a subclass of the simple Lie algebras for all odd primes make this volume an invaluable source and reference for all research mathematicians and advanced graduate students in algebra
