Communicating Protected Areas:

Communicating Protected Areas Denise Hamú, Elisabeth Auchincloss, Wendy Goldstein, 2004 Protected areas operate within complex ecological and social systems presenting challenges that cannot be resolved by technical solution alone Achieving the management objectives of protected areas requires a social approach in which strategic communication is a key instrument This publication explores the often underestimated potential of communication sharing valuable experiences from protected areas across the world drawing on papers presented at the Vth IUCN World Parks Congress 2003 and others

Asking Visitors to Help Sam H. Ham, Betty Weiler, Michael Hughes, Terry Brown, Jim Curtis, Mark Poll, 2008 The overarching purpose of the project was to enhance recognition among protected area management agencies of the role of strategic communication in managing visitors in protected areas This involved working closely with managers of terrestrial protected areas in Victoria Tasmania and Western Australia toward developing and delivering purposeful targeted communication interventions informed by substantiated theory and designed to reduce visitor impacts identified by those agencies as being high priority This title is also available for FREE download at www.crctourism.com.au

Protected Areas and the Regional Planning Imperative in North America John Chadwick Day, James Gordon Nelson, Lucy M. Sportza, 2003 Regional planning is imperative if North America has any hope of retaining continental biodiversity This timely collection of essays that presents new protected area theory method and practice reinforces this theme of regional planning With a North American focus these essays consider the history ecology policy and planning of protected areas while raising awareness of their contribution to society Contemporary understanding of protected areas are challenged as the book forces readers to move from a mentality of the past that saw protected areas as fortresses to a wider understanding of where protected areas are seen as interdependent with other landscapes in the matters of biodiversity ecological integrity and environmental health Public officials in resources and environmental management NGOs concerned with parks and protected areas and students of tourism environment and planning and education will find current ideology and application in this collection of essays by scholars from Canada the United States and Mexico

Air Ministry, 1926 *Science and the Management of Protected Areas* J. H. Martin Willison, 1992 As a result of the consumption of wildland by the demands of a growing world human population parks and other protected areas are becoming increasingly important The role of science in the effective management of such areas is a critical consideration if protected areas are to serve their several functions as recreational areas heritage and educational resources wildlife refuges natural repositories of endangered species reference sites for scientific research and sites set aside simply for their intrinsic natural value as wilderness In this volume strategies to combat accelerating decline in global biodiversity are put forward Legal protection requires explicit strategies for the management of natural systems such as the

scientific approach to land use planning and reserve selection and design Science should play an essential role in assisting in the definition of strategic objectives and providing means for the realization of those objectives The natural systems requiring protection are dynamic and management objectives are of necessity very long term Science and the Management of Protected Areas provides a wealth of information on floral and faunal management global change research water quality human impacts and tourism It is the first book ever to bring together the perspectives of both environmental scientists and the administrative managers of protected areas and as such it will be useful to both the scientific community and to Land Managers
