Japanese Style Companion Planting Toshio Kijima,2020-06-02 Japanese Style Companion Planting brings the techniques of a master farmer in Japan to home gardeners all over the world with over 175 easy to follow color illustrations and detailed texts Japanese gardeners typically work with small plots and are experts at making the most efficient use of available garden space They have long understood that when compatible vegetables and fruits are grown together the result is increased yields healthier plants fewer pest problems and better taste Vegetables from small gardens are the mainstay of Japan s famously healthy cuisine and movement towards farm to table dining tradition Author Toshio Kijima is head of the Biotechnology Department at Tochigi Agricultural Station in Japan and principal of the Nogyo Daigakko School of Natural Farming In this book he provides 88 different plant pairings including common favorites such as Tomato with basil Eggplant with green beans Carrots with edamame Iceberg lettuce with

broccoli Strawberries with garlic Green beans with arugula Blueberry bushes with mint and dozens of other pairings that yield tasty nutritious vegetables and fruits all grown without the need for pesticides or chemical fertilizers This book also covers excellent combinations for relay planting such as watermelon followed by spinach spinach followed by broccoli broccoli followed by potato and many more Clear and precise instructions are given for each combination from planning and preparing your plot to planting depths and spacing all accompanied by detailed color drawings and photographs Information on the theory and basics of companion planting will ensure a smooth transition to sustainable gardening techniques that millions of home gardeners are using [Companion Planting](#) Thomas Ribble, 2020-04-26 Do you want to harvest and eat your vegetables without using harmful chemicals to repel harmful pests Are you interested in a planting method that helps the nature If the answer is yes this is the right book for you In the early days before there were pesticides and herbicides companion planting was used by the settlers to repel harmful pests and enhance the crop yields Plants were often paired up or often tripled up so as to balance out the levels of nutrients that were found in the soil The nutrient that one plant needed was often a surplus or sometimes waste product of another and thus a grouping could live in harmony This also reduced the need for harmful pesticides and also fertilizer since these plants could actually make their own So what does companion planting entail anyway This is actually a method of gardening where specific species of plants are put in close proximity in order to keep away pests and to increase the growth of each type as well This doesn't mean however that you can just put any two vegetable plants together Some species just won't do as well with this method unless properly paired up with the right partner It is important to study these plants in order to figure out which ones need more water and take up a lot of nutrients from the soil If you should happen to grow a pair of plants in the same area that will suck up a lot of the moisture they will actually be harmed by this practice instead of being helped This book covers What's Companion Planting Benefit Of Companion Planting Companion Planting Strategies Types of Insects Good And Bad Insects Garden Planning Companion Planting Chart Perfect Combinations How to Get Started Companion Vegetables Beginner Mistakes to Avoid And much more It's a good idea to calculate two species that will benefit each other in order to make each one thrive For example a hay crop may be grown in the same area for two years consecutively but it will tend to deplete the soil of all its nutrients Farmers have found that planting the same space with oats will help to put these back in order to put in a field of hay once again This is kind of how companion planting works It is a smaller version of an ecosystem that lets Mother Nature do her thing Not only does companion planting work well with plant growth but it can also help to repel harmful insects as well Remember though not all insects are harmful as some actually will benefit both the soil and the plants One good plant species that will help you to control aphids is marigolds Not only are these flowers beautiful to look at but they act as a natural barrier that helps to keep out bugs Another type that will perform this same action is garlic as its pungent odor is a natural deterrent It's a good practice to plant garlic around potato beds for example to keep the potato beetle from invading this prized tuber Ready to get

The Ultimate Guide to Companion Gardening for Beginners Lindsey Pylarinos, 2016-01-06. Companion gardening is just planting certain plants together because they will help each other grow and become healthier. It is said that companion gardening is even better than using fertilizers or artificial ways of letting plants grow because the plants can benefit from each other and it's all a natural process. Some of the basics of Companion Gardening: Tall plants are planted near shorter plants so they could shade for the shorter plants. This works best between sunflowers and corn. Companion Plants can lure away pests from green leafy vegetables and they can also attract beneficial insects to help in the pollination of flowers. For instance aphids are attracted to plants like Nasturtium this lures them away from the other plants in the garden. You can plant two plants on the same patch which will save you space and time.
