

# Introduction

---

- ❑ **Electrical wiring** is an electrical installation of cabling and associated devices such as switches, distribution boards, sockets, and light.
- ❑ **Electrical installation** circuits depart from its own panelboard allowing the circulation of electricity up to each utilization point.
- ❑ Each circuit is protected by a circuit breaker mounted in the panelboard.
- ❑ These circuits consist of electrical wires or cables. Some of them are connected directly between the protective device and the end point (case of a receptacle, outlet for hot plates,...). Some others are connected to the end point through a command device (switch for lighting, pushbutton for bell,...). And others are connected by the means of contactors or relays (case of an electric water heater for example).
