An Introduction To Optics In Computers:

An Introduction to Optics in Computers Henri H. Arsenault, Yunlong Sheng, 1992 This volume surveys the entire field of optical computing The emphasis is on breadth of coverage The book is descriptive the authors minimize the use of mathematics and it is therefore most suitable for those who require an overall view of what is going on in this field A detailed comparison is given of the capabilities of electronics and optics and the degree to which these capabilities have been achieved is indicated Other areas of focus include optical computing architectures components and technologies optical interconnects and optical neural nets Approximately 300 references to key works in the field are included Optical Computing Mohammad A. Karim, Abdul A. S. Awwal, 1992-04-22 A source on the rapidly changing field of optical computing Readers are taken through the relevant concepts of classical and Fourier optics digital logic and digital image processing In addition to exploration of the basic principles it applies the characteristics of both all optical and electro optic devices systems to the solution of optical computing Additional discussions focus on analog optical computing digital logic and digital optical computing Exercise problems up to date references and further reading resources complete the book Optical Computing Mohammad A. Karim, Mustafa A. G. Abushagur, 1994 *Introduction to Information Optics* Francis T.S. Yu, Suganda Jutamulia, Shizuhuo Yin, 2001-09-12 While there are books treating individual topics contained in this book this will be the first single volume providing a cohesive treatment on this subject as a whole This goes beyond optical communications in that it includes related topics such as sensing displays computing and data storage **An Introduction to Applied Optics** Louis Claude Martin, 1930 **Optical Processing and Computing** Henri Arsenault, 2012-12-02 Optical Processing and Computing is a collection of research from the USA Canada Russia and Poland on the developments in the fields of digital optical computing and analog optical processing This book is organized into 15 chapters and begins with an overview of the hierarchy of interconnect problems Some chapters deal with the fundamental limitations and capabilities of optics in relation to interconnections switching computing materials and devices Other chapters explore the architectures technology and applications of the field The topics range from promising areas in the early stages of development such as nonlinear effects in fibers that could bring about the optical transistor to developments in areas ready for technology such as the production of optical kinoforms an important type of computer generated optical component With a strong focus on the fundamental aspects of the field this book is of interest to specialists researchers and students who need a broad coverage of the principles of optical computing and of the underlying physics *Massively Parallel, Optical, and Neural Computing in the United States* Gilbert Kalb, Robert Moxley, 1992 A survey of products and research projects in the field of highly parallel optical and neural computers in the USA It covers operating systems language projects and market analysis as well as optical computing devices and optical connections of electronic parts High Performance Computing and Applications Wu Zhang, Zhangxin Chen, Craig C.
