Pension Funding, Pension Asset Allocation, and Corporate Finance Benjamin M. Friedman,1982 This paper examines the relationship between U S corporations management of their pension plans and their management of the more familiar aspects of corporate financial structure The chief conclusion on the basis of data for 7 828 pension plans sponsored by 1 836 companies and their subsidiaries is that corporations do not manage the pension plans which they sponsor as if these plans had nothing to do with the corporation Different responses appear to characterize firms behavior in different contexts but the evidence persistently indicates clear relationships between decisions about pension assets and liabilities and decisions about

the other assets and liabilities of the firm At the same time the pattern of these relationships is more often than not inconsistent with familiar hypotheses that have emerged thus far in the theoretical literature analyzing pension aspects of corporate finance Hence the conclusion from the data is also that the connections between pension decisions and corporate financial decisions in the more conventional sense are at least as yet not well understood
