Sobecki, 2010-03-16 Barnett Ziegler Byleen and Sobecki's College Algebra with Trigonometry text is designed to be user
friendly and to maximize student comprehension by emphasizing computational skills ideas and problem solving as opposed
to mathematical theory The large number of pedagogical devices employed in this text will guide a student through the
course Integrated throughout the text students and instructors will find Explore Discuss boxes which encourage students to
think critically about mathematical concepts In each section the worked examples are followed by matched problems that
reinforce the concept being taught In addition the text contains an abundance of exercises and applications that will convince
students that math is useful A MathZone site featuring algorithmic exercises videos and other resources accompanies the

development of this new college algebra text The use of technology primarily graphing utilities is assumed throughout the
text The development of each topic proceeds from the concrete to the abstract and takes full advantage of technology
wherever appropriate The first major objective of this book is to encourage students to investigate mathematical ideas and
processes graphically and numerically as well as algebraically Proceeding in this way students gain a broader deeper and
more useful understanding of a concept or process Even though concept development and technology are emphasized
manipulative skills are not ignored and plenty of opportunities to practice basic skills are present A brief look at the table of
contents will reveal the importance of the function concept as a unifying theme The second major objective of this book is the
development of a library of elementary functions including their important properties and uses Having this library of
elementary functions as a basic working tool in their mathematical tool boxes students will be able to move into calculus with
greater confidence and understanding In addition a concise review of basic algebraic concepts is included in Appendix A for
easy reference or systematic review The third major objective of this book is to give the student substantial experience in

solving and modeling real world problems Enough applications are included to convince even the most skeptical student that mathematics is really useful Most of the applications are simplified versions of actual real world problems taken from professional journals and professional books No specialized experience is required to solve any of the applications

Rockswold, 2002-06 This major revision reflects the authors combined years of experience as classroom teachers and underscores their enthusiasm for the use of the graphing calculator as a teaching tool Their approach is to present the various classes of functions examine the nature of its graph and discuss the analytic solution of equations based on that function Then graphical support for the solution is provided with a graphing calculator Using graphing technology to study math has opened up a new area of error analysis so the authors have included a What Went Wrong feature to discuss typical errors Throughout the accent is on using both analytical and graphical methods to solve interesting applications for various functions The new edition also includes a reference chapter on basic algebraic concepts for those needing a refresher course
