Dynamic Modeling Bruce M. Hannon, Matthias Ruth, 1994
Dynamic Modeling introduces an approach to modeling that makes it a more practical intuitive endeavour. The book enables readers to convert their understanding of a phenomenon to a computer model and then to run the model and let it yield the inevitable dynamic consequences built into the structure of the model. Part I provides an introduction to modeling dynamic systems while Part II offers general methods for modeling. Parts III through to VIII then apply these methods to model real world phenomena from chemistry genetics ecology economics and engineering. To develop and execute dynamic simulation models Dynamic Modeling comes with STELLA II run time software for Windows based computers as well as computer files of sample models used in the book. A clear approachable introduction to the modeling process of interest in any field where real problems can be illuminated by computer simulation.

Modeling of Dynamic Systems Lennart Ljung, Torkel Glad, 1994
Written by a recognized authority in the field of identification and control this book draws together into a single volume the important aspects of system identification AND physical modelling.

KEY TOPICS Explores techniques used to construct mathematical models of systems based on knowledge from physics chemistry biology etc e.g. techniques with so called bond graphs as well those which use computer algebra for the modeling work. Explains system identification techniques used to infer knowledge about the behavior of dynamic systems based on observations of the various input and output signals that are available for measurement. Shows how both types of techniques need to be applied in any given practical modeling situation. Considers applications primarily simulation.

MARKET For practicing engineers who are faced with problems of modeling.
