Computer Analysis Of Visual Textures:

Computer Analysis of Visual Textures Fumiaki Tomita, Saburo Tsuji, 2013-11-11 This book presents theories and techniques for perception of textures by computer. Texture is a homogeneous visual pattern that we perceive in surfaces of objects such as textiles, tree barks or stones. Texture analysis is one of the first important steps in computer vision since texture provides important cues to recognize real world objects. A major part of the book is devoted to two dimensional analysis of texture patterns by extracting statistical and structural features. It also deals with the shape from texture problem which addresses recovery of the three dimensional surface shapes based on the geometry of projection of the surface texture to the image plane. Perception is still largely mysterious. Realizing a computer vision system that can work in the real world requires more research and experiment. Capability of textural perception is a key component. We hope this book will contribute to the advancement of computer vision toward robust useful systems. We would like to express our appreciation to Professor Takeo Kanade at Carnegie Mellon University for his encouragement and help in writing this book to the members of Computer Vision Section at Electrical Laboratory for providing an excellent research environment and to Carl W Harris at Kluwer Academic Publishers for his help in preparing the manuscript. *Computer Analysis of Visual Textures*

Michal Haindl, Jiri Filip, 2013-01-18 This book surveys the state of the art in multidimensional physically correct visual texture modeling. Features reviews the entire process of texture synthesis including material appearance representation, measurement, analysis, compression, modeling, editing, visualization and perceptual evaluation. Explains the derivation of the most common representations of visual texture, discussing their properties, advantages and limitations. Describes a range of techniques for the measurement of visual texture including BRDF, SVBRDF, BTF and BSSRDF. Investigates the visualization of textural information from texture mapping and

mip mapping to illumination and view dependent data interpolation examines techniques for perceptual validation and analysis covering both standard pixel wise similarity measures and also methods of visual psychophysics reviews the applications of visual textures from visual scene analysis in medical applications to high quality visualizations in the automotive industry *Computer Methods for Analysis and Synthesis of Visual Texture* Sadali Narasappa Jayaramamurthy,1973 Visual Texture Analysis Eleanor B. Deutsch,Azriel Rosenfeld,1971 Computer Vision: Systems, Theory And Applications: Selected Papers From Vision Interface 1992 Anup Basu,Xiaobo Li,1993-05-28 This book contains a selection of papers which were presented at the Vision Interface 92 Conference It also includes several invited articles from prominent researchers in the field suggesting future directions in Computer Vision Computational Models of Visual Processing Michael S. Landy,J. Anthony Movshon,1991 The more than twenty contributions in this book all new and previously unpublished provide an up to date survey of contemporary research on computational modeling of the visual system The approaches represented range from neurophysiology to psychophysics and from retinal function to the analysis of visual cues to motion color texture and depth The contributions are linked thematically by a consistent consideration of the links between empirical data and computational models in the study of visual function An introductory chapter by Edward Adelson and James Bergen gives a new and elegant formalization of the elements of early vision Subsequent sections treat receptors and sampling models of neural function detection and discrimination color and shading motion and texture and 3D shape Each section is introduced by a brief topical review and summary ContributorsEdward H Adelson Albert J Ahumada Jr James R Bergen David G Birch David H Brainard Heinrich H B lthoff Charles Chubb Nancy J Coletta Michael D Zmura John P Frisby Norma Graham Norberto M Grzywacz P William Haake Michael J Hawken David J Heeger Donald C Hood Elizabeth B Johnston Daniel Kersten Michael S Landy Peter Lennie J Stephen Mansfield J Anthony Movshon Jacob Nachmias Andrew J Parker Denis G Pelli Stephen B Pollard R Clay Reid Robert Shapley Carlo L M Tiana Brian A Wandell Andrew B Watson David R Williams Hugh R Wilson Yuede Yang Alan L Yuille Integrating Computational and Neural Findings in Visual Object Perception Judith C. which deal with the problems of visual texture specifically Texture Analysis and Texture Synthesis The Decision Theory Method as its name indicates is based on the principles of statistical decision theory This method in conjunction with the Interval Covering Theory automatically generates a set of interval complexes which act as 2 D filters that detect texture features in the scene of analysis The versatility of this method to deal with various problems of visual texture such as scene segmentation using textural information extraction of texture borders discrimination recognition of both spatially and chromatically textured scenes etc is demonstrated A model is proposed that views the pixels of a digitized textural scene as a two way seasonal time series Based on this model a method is developed for synthesis of natural looking textures This method possesses a desirable quality that the parameters needed for the synthesis are derived from the analysis of parent texture i e the texture to be imitated Extending the concepts of two dimensional formal grammars known as array grammars multilevel array grammars are introduced These are shown capable of generating complex texture scenes specifically brickwall type texture that is those textures which are perceived at many levels and at each level they can be either structural or statistical A way of specifying these grammars for texture scenes in real cases with the help of interval complexes is also indicated 96 references auth
