

CSP physical vs CSP empirical

CSP Physical	CSP Empirical
The physical trough model characterizes many of the system components from first principles of heat transfer and thermodynamics, rather than from empirical measurements as in the empirical trough system model.	uses a set of curve-fit equations derived from regression analysis of data measured from the SEGS projects in the southwestern United States, so you are limited to modeling systems composed of components for which there is measured data

In short	
Physical	Empirical
Can be applied any where	Only applicable where measured SEGS data is present
Flexible	Less flexible
Some level of uncertainty	More certain
