[Computer Simulation Models of Human Behavior: a History of an Intellectual Technology](#) John M. Dutton, William H. Starbuck, 1971      *Modeling and Simulation of Human Behavior* Emory Sanders, 2021-11-26 Understanding human behavior is generally a difficult task because of the complexity of the individual or the group of individuals that is subjected to intertwined factors forces values and other motivational resources that are influencing behavior A qualitative model of the individual was developed to account for the factors and forces exerted on the individual and the individual's goals Personal behavior was further modeled by a vector with a magnitude and a direction The magnitude depends on factors and forces that may be unleveraged or leveraged The direction of the behavior vector represents the goals of the individual The behavior model was extended to a group of individuals by considering a group vector The role of past experience and resources supporting and influencing the individual and the group were identified and discussed Decision processes for the individual and the group were developed since it is through decisions that behavior is developed and adopted The model also includes immutable factors to guide the individual toward a task oriented or relationship oriented human behavior An error process was also developed to identify and correct errors so that the decisions taken are accurate complete and up to date Several illustrative applications of the human behavior model are presented and discussed These applications relate to the individual and the group with specific goals and in particular situations      [Bibliography of Computer Simulation of Human Behavior](#) John M.
