Mathematical Foundations of Image Processing and Analysis Jean-Charles Pinoli, 2014 Mathematical Imaging is currently a rapidly growing field in applied mathematics with an increasing need for theoretical mathematics This book the second of two volumes emphasizes the role of mathematics as a rigorous basis for imaging sciences It provides a comprehensive and convenient overview of the key mathematical concepts notions tools and frameworks involved in the various fields of gray tone and binary image processing and analysis by proposing a large but coherent set of symbols and notations a complete list of subjects and a detailed bibliography It establishes

Image Processing and Machine Learning, Volume 2 Erik Cuevas, Alma Nayeli Rodríguez, 2024-02-16 Image processing and machine learning are used in conjunction to analyze and understand images Where image processing is used to pre process images using techniques such as filtering segmentation and feature extraction machine learning algorithms are used to interpret the processed data through classification clustering and object detection This book serves as a textbook for students and instructors of image processing covering the theoretical foundations and practical applications of some of the most prevalent image processing methods and approaches Divided into two volumes this second installment explores the more advanced concepts and techniques in image processing including morphological filters color image processing image matching feature based segmentation utilizing the mean shift algorithm and the application of singular value decomposition for image compression This second volume also incorporates several important machine learning techniques applied to image processing building on the foundational knowledge introduced in Volume 1 Written with instructors and students of image processing in mind this book s intuitive organization also contains appeal for app developers and engineers

Principles of Digital Image Processing Wilhelm Burger, Mark J. Burge, 2013-11-18 This textbook is the third of three volumes which provide a modern algorithmic introduction to digital image processing designed to be used both by learners desiring a firm foundation on which to build and practitioners in search of critical analysis and concrete implementations of the most important techniques This volume builds upon the introductory material presented in the first two volumes with additional key concepts and methods in image processing Features practical examples and carefully constructed chapter ending exercises real implementations concise mathematical notation and precise algorithmic descriptions designed for programmers and practitioners easily adaptable Java code and completely worked out examples for easy inclusion in existing applications uses ImageJ provides a supplementary website with the complete Java source code test images and corrections additional presentation tools for instructors including a complete set of figures tables and mathematical elements

Intelligent Vision Systems for Industry Bruce G. Batchelor, Paul F. Whelan, 2012-12-06 The application of intelligent imaging techniques to industrial vision problems is an evolving aspect of current machine vision research Machine vision is a relatively new technology more concerned with systems engineering than with computer science and with much to offer the manufacturing industry in terms of improving efficiency safety and

product quality Beginning with an introductory chapter on the basic concepts the authors develop these ideas to describe intelligent imaging techniques for use in a new generation of industrial imaging systems Sections cover the application of AI languages such as Prolog the use of multi media interfaces and multi processor systems external device control and colour recognition The text concludes with a discussion of several case studies that illustrate how intelligent machine vision techniques can be used in industrial applications
