**Handbook of Learning and Cognitive Processes** W. Estes, 2022-07-30 Is it possible at present to identify a core cluster of theoretical ideas, concepts, and methods with which everyone working in the area of learning and cognition needs to be familiar? Would it be possible to make explicit the relationships that we feel do or must exist among the various subspecialties ranging from conditioning through perceptual learning and memory to psycholinguistics and to present these in a sufficiently organized way to help specialists and non-specialists alike in relating particular lines of research to the broader spectrum of activity? These questions were posed to a substantial number of investigators who were most active in developing the ideas and doing the research in the early 1970s. Originally published between 1975 and 1978, their response constitutes this 6-volume *Handbook of Learning and Cognitive Processes*. The volumes survey the research and theory on learning and cognitive processes that were rapidly developing at the time. The primary orientation was to concentrate on research and models aimed toward the development of general cognitive theory. They were up to date with regard to theoretical and technical developments and sufficiently self-contained to be readable by anyone with a reasonable scientific background regardless of their acquaintance with the technical jargon of particular specialties. Previously out of print, the *Handbook* is now available again as a set or as individual volumes.

**Outlines of psychology, with special references to the theory of education** James Sully, 1888 *Handbook of Learning and Cognitive Processes* William K. Estes, 1975 Originally published in 1978 Volume 6 concludes the survey of research and theory on learning and cognitive processes that was envisaged when the plan for this *Handbook* was sketched. The primary orientation in the planning the *Handbook* was to concentrate on research and models aimed toward the development of general cognitive theory. The first five chapters of this volume are organized in relation to one of the research areas that had expanded most vigorously during the period of planning and writing of the *Handbook*. These chapters treat aspects of psycholinguistics most closely related to research and theory covered in the other volumes. Perhaps the most fertile source of new concepts and models closely related to other branches of cognitive theory has been research on semantic memory. This work is given a critical review and interpretation by Smith in the first chapter of this volume following which some lines of theoretical development leading upward into problems of comprehension of meaningful material are reviewed by Kintsch then connections downward into more elementary problems of coding in memory by Johnson. Also Johnson's chapter shades into the very active current body of work on perceptual and memorial processes in reading carried further by Baron's examination of perceptual learning in relation to letter and word recognition. Finally we consider inputs to the psycholinguistic system via speech and speech perception. The strong emphasis of Pisoni's chapter on speech perception

rather than production simply reflects both the predominance of research on perceptual aspects of speech in the current cognitive literature and the close relationships of this research to other lines of investigation of perception and short term memory Some knowledge of the history of the subject and some understanding of the way some of the more persuasive concepts and principles have evolved may serve present day investigators better than boosting their reading rates The final chapter of the present volume provides some documentation for this last suggestion

**The Acquisition and Retention of Knowledge: A Cognitive View** D.P. Ausubel, 2012-12-06 In 1963 an initial attempt was made in my The Psychology of Meaningful Verbal Learning to present a cognitive theory of meaningful as opposed to rote verbal learning It was based on the proposition that the acquisition and retention of knowledge particularly of verbal knowledge as for example in school or subject matter learning is the product of an active integrative interactional process between instructional material subject matter and relevant ideas in the learner's cognitive structure to which the new ideas are relatable in particular ways This book is a full scale revision of my 1963 monograph The Psychology of Meaningful Verbal Learning in the sense that it addresses the major aforementioned and hitherto unmet goals by providing for an expansion clarification differentiation and sharper focusing of the principal psychological variables and processes involved in meaningful learning and retention i e for their interrelationships and interactions leading to the generation of new meanings in the individual learner The preparation of this new monograph was largely necessitated by the virtual collapse of the neobehavioristic theoretical orientation to learning during the previous forty years and by the meteoric rise in the seventies and beyond of constructivist approaches to learning theory
