

The 7 Dimensions of Applied Behaviour Analysis (ABA)

All behavioural interventions include the seven dimensions of ABA, which are:

1. Applied

This means that the behaviours selected for change must be socially significant to the client. The behaviour change must benefit the client by improving their quality of life, by increasing their independence, and/or by increasing their integration in society.

2. Behavioural

The behaviours selected for change (i.e., target behaviours) must be observable and measurable. Behaviour is anything a person can do or say.

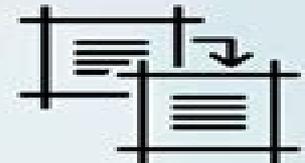

3. Analytic

A behavioural intervention is determined to be successful once it has demonstrated reliable control over the target behaviour. This is achieved by ensuring that the behavioural intervention is what is responsible for the behaviour change, and not some confounding variable.

4. Technological

The intervention procedures must be written in enough detail for anyone to be able to replicate it & get the same results.

5. Conceptual Systems

The interventions must use ABA terms and principles derived from evidence-based literature.

6. Effective

A behavioural intervention is effective when the behaviour change it produces is large enough to be considered of practical value. Social validity is a great measure of effectiveness that would involve examining:

- The social significance of the target behaviour selected
- The social appropriateness of the procedures - i.e., reinforcement or punishment procedure, ethicality, etc.
- The social importance of the effects - i.e., is the client & other consumers satisfied with the behaviour change that occurred? Did it lead to social integration and/or increased independence and quality of life for the client?

7. Generality

The behavioural intervention must produce a durable change in behaviour that lasts across settings, people, and behaviours.

universal bodily experience By drawing on a wide selection of comparable linguistic data from dozens of languages including a number of less researched languages this volume provides the most comprehensive account of what is universal and what is variable in the folk model of anger and why It also investigates the role that metonymies might play in the emergence of anger related metaphors and in what ways context influences or shapes anger metaphors and thereby the resulting folk model of anger No such volume exists in the cognitive linguistic literature on anger or on emotions for that matter The book is thus an essential contribution to the study of anger and will serve as basic reading for any researcher interested in how the conceptualization of anger is constructed via the interplay of bodily experience language and the larger cultural context
