## **Analytic Elements In P-adic Analysis:**

Analytic Elements in P-adic Analysis Alain Escassut, 1995 This is probably the first book dedicated to this topic The behaviour of the analytic elements on an infraconnected set  $D$  in  $K$  an algebraically closed complete ultrametric field is mainly explained by the circular filters and the monotonous filters on  $D$  especially the  $T$  filters zeros of the elements Mittag Leffler series factorization Motzkin factorization maximum principle injectivity algebraic properties of the algebra of the analytic elements on  $D$  problems of analytic extension factorization into meromorphic products and connections with Mittag Leffler series This is applied to the differential equation  $y' = hy$  analytic elements on  $D$  analytic interpolation injectivity and to the  $p$  adic Fourier transform

**Value Distribution In P-adic Analysis** Alain Escassut, 2015-11-27 The book first explains the main properties of analytic functions in order to use them in the study of various problems in  $p$  adic value distribution Certain properties of  $p$  adic transcendental numbers are examined such as order and type of transcendence with problems on  $p$  adic exponentials Lazard's problem for analytic functions inside a disk is explained  $P$  adic meromorphics are studied Sets of range uniqueness in a  $p$  adic field are examined The ultrametric Corona problem is studied Injective analytic elements are characterized The  $p$  adic Nevanlinna theory is described and many applications are given  $p$  adic Hayman conjecture Picard's values for derivatives small functions branched values growth of entire functions problems of uniqueness URSCM and URSIM functions of uniqueness sharing value problems Nevanlinna theory in characteristic  $p > 0$   $p$  adic Yosida's equation

A Course in p-adic Analysis Alain M. Robert, 2013-04-17 Kurt Hensel 1861-1941 discovered the  $p$  adic numbers around the turn of the century These exotic numbers or so they appeared at first are now well established in the mathematical world and used more and more by physicists as well This book offers a self contained presentation of basic  $p$  adic analysis The author is especially interested in the analytical topics in this field Some of the features which are not treated in other introductory  $p$  adic analysis texts are topological models of  $p$  adic spaces inside Euclidean space a construction of spherically complete fields a  $p$  adic mean value theorem and some consequences a special case of Hazewinkel's functional equation lemma a remainder formula for the Mahler expansion and most importantly a treatment of analytic elements

P-adic Analytic Functions Alain Escassut, 2021-03-17  $P$  adic Analytic Functions describes the definition and properties of  $p$  adic analytic and meromorphic functions in a complete algebraically closed ultrametric field Various properties of  $p$  adic exponential polynomials are examined such as the Hermite Lindemann theorem in a  $p$  adic field with a new proof The order and type of growth for analytic functions are studied in the whole field and inside an open disk  $P$  adic meromorphic functions are studied not only on the whole field but also in an open disk and on the complement of an open disk using Motzkin meromorphic products Finally the  $p$  adic Nevanlinna theory is widely explained with various applications Small functions are introduced with results of uniqueness for meromorphic functions The question of whether the ring of analytic functions in the whole field or inside an open disk is a Bezout ring is also examined

**P-Adic Analysis** Alain Escassut, 2015-11-27 The book first explains the main properties of analytic functions in order to use them in the study of various problems in  $p$ -adic value distribution. Certain properties of  $p$ -adic transcendental numbers are examined such as order and type of transcendence with problems on  $p$ -adic exponentials. Lazard's problem for analytic functions inside a disk is explained.  $p$ -adic meromorphics are studied. Sets of range uniqueness in a  $p$ -adic field are examined. The ultrametric Corona problem is studied. Injective analytic elements are characterized. The  $p$ -adic Nevanlinna theory is described and many applications are given.  $p$ -adic Hayman conjecture, Picard's values for derivatives, small functions, branched values, growth of entire functions, problems of uniqueness, URSCM and URSIM functions of uniqueness, sharing value problems, Nevanlinna theory in characteristic  $p > 0$ ,  $p$ -adic Yosida's equation. **p-adic Functional Analysis** W.H. Schikhof, C. Perez-Garcia, Jerzy Kakol, 2020-11-25 Contains research articles by nearly 40 leading mathematicians from North and South America, Europe, Africa, and Asia presented at the Fourth International Conference on  $p$ -adic Functional Analysis held recently in Nijmegen, The Netherlands. Includes numerous new open problems documented with extensive comments and references. **Advances in Ultrametric Analysis** Alain Escassut, Cristina Perez-Garcia, Khodr Shamseddine, 2018-03-26 Articles included in this book feature recent developments in various areas of non-Archimedean analysis: summation of adic series, rational maps on the projective line over non-Archimedean Hahn-Banach theorems, ultrametric Calkin algebras, modules with a convex base, non-compact Trace class operators and Schatten class operators in adic Hilbert spaces, algebras of strictly differentiable functions, inverse function theorem and mean value theorem in Levi-Civita fields, ultrametric spectra of commutative non-unital Banach rings, classes of non-Archimedean  $K$ -spaces, adic Nevanlinna theory and applications, and sub-coordinate representation of adic functions. Moreover, a paper on the history of adic analysis with a comparative summary of non-Archimedean fields is presented. Through a combination of new research articles and a survey paper, this book provides the reader with an overview of current developments and techniques in non-Archimedean analysis as well as a broad knowledge of some of the sub-areas of this exciting and fast-developing research area. **Value Distribution In Ultrametric Analysis And Applications** Alain Escassut, 2024-12-20 After a construction of the complete ultrametric fields  $K$ , the book presents most of the properties of analytic and meromorphic functions in  $K$ : algebras of analytic elements, power series in a disk, order type and cotype of growth of entire functions, clean functions, question on a relation true for clean functions and a counter example on a non-clean function. Transcendence order and transcendence type are examined with specific properties of certain  $p$ -adic numbers. The Kakutani problem for the Corona problem is recalled and multiplicative semi-norms are described. Problems on exponential polynomials, meromorphic functions are introduced and the Nevanlinna Theory is explained with its applications, particularly to problems of uniqueness. Injective analytic elements and meromorphic functions are examined and characterized through a relation. The Nevanlinna Theory out of a hole is described. Many results on zeros of a meromorphic function and its derivative are examined, particularly the solution of the Hayman conjecture in a  $p$ -adic field is

given Moreover if a meromorphic functions in all the field admitting primitives admit a Picard value then it must have enormously many poles Branched values are examined with links to growth order of the denominator The Nevanlinna theory on small functions is explained with applications to uniqueness for a pair of meromorphic functions sharing a few small functions A short presentation in characteristic  $p$  is given with applications on Yoshida equation *Algebra And Number Theory* Mohammed Boulagouaz, Jean-Pierre Tignol, 1999-11-09 This study demonstrates the key manipulations surrounding Brauer groups graded rings group representations ideal classes of number fields  $p$  adic differential equations and rationality problems of invariant fields displaying a command of the most advanced methods in algebra It describes new developments in noncommutative valuation theory and **Lectures on  $p$ -adic Differential Equations** Bernard Dwork, 2012-12-06 The present work treats  $p$  adic properties of solutions of the hypergeometric differential equation  $d^2 x + c_1 x dx + c_2 x^2 dx + a_1 x dx + a_2 x^2 dx + b_1 x dx + b_2 x^2 dx + 0 = 0$  with  $a, b, c$  in  $\mathbb{Z}_p$  by constructing the associated Frobenius structure For this construction we draw upon the methods of Alan Adolphson in his 1976 work on Hecke polynomials We are also indebted to him for the account appearing as an appendix of the relation between this differential equation and certain  $L$  functions We are indebted to G Washnitzer for the method used in the construction of our dual theory Chapter 2 These notes represent an expanded form of lectures given at the U L P in Strasbourg during the fall term of 1980 We take this opportunity to thank Professor R Girard and IRMA for their hospitality Our subject  $p$  adic analysis was founded by Marc Krasner We take pleasure in dedicating this work to him

(AM-162)** Vladimir G. Berkovich, 2007 Among the many differences between classical and  $p$  adic objects those related to differential equations occupy a special place For example a closed  $p$  adic analytic one form defined on a simply connected domain does not necessarily have a

primitive in the class of analytic functions In the early 1980s Robert Coleman discovered a way to construct primitives of analytic one forms on certain smooth  $p$  adic analytic curves in a bigger class of functions Since then there have been several attempts to generalize his ideas to smooth  $p$  adic analytic spaces of higher dimension but the spaces considered were invariably associated with algebraic varieties This book aims to show that every smooth  $p$  adic analytic space is provided with a sheaf of functions that includes all analytic ones and satisfies a uniqueness property It also contains local primitives of all closed one forms with coefficients in the sheaf that in the case considered by Coleman coincide with those he constructed In consequence one constructs a parallel transport of local solutions of a unipotent differential equation and an integral of a closed one form along a path so that both depend nontrivially on the homotopy class of the path Both the author's previous results on geometric properties of smooth  $p$  adic analytic spaces and the theory of isocrystals are further developed in this book which is aimed at graduate students and mathematicians working in the areas of non Archimedean analytic geometry number theory and algebraic geometry

**P-Adic Mathematical Physics** Zoran Rakic, Igor V. Volovich, 2006-04-06 The subject of this conference was recent developments in  $p$  adic mathematical physics and related areas The field of  $p$  Adic mathematical physics was conceived in 1987 as a result of attempts to find non Archimedean approaches to space time at the Planck scale as well as to strings Since then many applications of  $p$  adic numbers and adèles in physics and related sciences have emerged Some of them are  $p$  adic and adelic string theory  $p$  adic and adelic quantum mechanics and quantum field theory ultrametricity of spin glasses biological and hierarchical systems  $p$  adic dynamical systems  $p$  adic probability theory  $p$  adic models of cognitive processes and cryptography as well as  $p$  adic and adelic cosmology

**The Bieberbach Conjecture: Proceedings of the Symposium on the Occasion of the Proof** Albert Baernstein (II), Albert Baernstein, 1986 For over 70 years the Bieberbach conjecture has intrigued the mathematical world Many students of mathematics who have had a first course in function theory have tried their hand at a proof But many have invested fruitless years of carefully manipulating inequalities in an attempt to establish the correct bound In 1977 Louis de Branges of Purdue University took up the challenge of this famous unsolved problem but in his case the outcome was different He will be recognized as the mathematician who proved Bieberbach's conjecture And more importantly his method came from totally unexpected sources operator theory and special functions This book based on the Symposium on the Occasion of the Proof tells the story behind this fascinating proof and offers insight into the nature of the conjecture its history and its proof A special and unusual feature of the book is the enlightened personal accounts of the people involved in the exciting events surrounding the proof Especially attractive are the photographs of mathematicians who have made significant contributions to univalent functions the area of complex analysis which provides the setting for the Bieberbach conjecture Research

mathematicians especially analysts are sure to enjoy the articles in this volume Most articles require only a basic knowledge of real and complex analysis The survey articles are accessible to non specialists and the personal accounts of all who have played a part in this important discovery will fascinate any reader The remarks by de Branges himself about the discovery of his proof should be read by all young mathematicians He describes the difficulty he had in convincing the experts in the field that a mathematician whose work was considered to lie in an entirely different area had actually proved a problem of such long standing When a mathematician is sure that he has the solution of a problem he must persist until he convinces others or is actually proved wrong Prepublication comments by James A Hummel The University of Maryland College Park The Journal of Analysis ,1998 *Scientiae Mathematicae Japonicae* ,2001
