

NUMERICAL ANALYSIS PROGRAMS IN PASCAL

This README file gives instructions for the Pascal programs on the disk. The programs are designed to run on a minimally configured computer. All the programs are given as ASCII files. They can be altered using any word processor that creates a standard ASCII file. These are commonly called "Text Only" files. To run the programs you must have the appropriate software. The Pascal programs follow recognized standards for the Pascal language.

During execution of some of the programs you will be asked questions of the form:

Has the function F been created in the program immediately
preceding the INPUT procedure ?

To run the sample problems you should enter the response

Y (for Yes)

since the functions are embedded within the programs. The functions will need to be changed, however, if the programs are to be modified to solve other problems.

Some of the programs require the input of large amounts of data or generate extensive output. To enable the programs to be run quickly and efficiently, the input data can be placed in data files and the data files read by the program. When the output is likely to be extensive, the programs have been constructed so that it is convenient to place the output directly into an output file. The programs will prompt you for the form of the input or output that you would like to use. For example, when running the program for Neville's method, NEVLLE31.PAS, using the defined data file NEVLLE31.DTA for the sample problems, you will first see a screen that states:

Choice of input method:
1. Input entry by entry from the keyboard
2. Input data from a text file
3. Generate data using a function F
Choose 1, 2, or 3 please

If you choose 1 you will need to enter all the data for the program from the keyboard, and any mistake in a data entry will require the program to be rerun. Choosing 2 will lead to the input of the data file NEVLLE31.DTA.

Choosing 3 causes the program to ask if the function has been defined. If you answer "Y" (for Yes), the program will assume that the function has been defined in the program and you will use that function to produce the required data. If you answer "N" (for No), the program will assume that you want to change the function before continuing the. Execution will consequently terminate so that the correct function can be entered into the program. Once you have entered the function correctly, the program can be rerun.
