National Monuments and Nationalism in 19th Century Germany Hans A. Pohlsander, 2008 No century in modern European history has built monuments with more enthusiasm than the 19th Of the hundreds of monuments erected those which sprang from a nation wide initiative and addressed themselves to a nation rather than part of a nation we may call national monuments Nelson s Column in London or the Arc de Triomphe in Paris are obvious examples In Germany the 19th century witnessed a veritable flood of monuments many of which rank as national monuments These reflected and contributed to a developing sense of national identity and the search for national unity they also document an unsuccessful effort to create a genuinely German style They constitute a historical record quite apart from aesthetic appeal or ideological message As this historical record is examined German national monuments of the 19th century are described and interpreted against the background of the nationalism which gave birth to them
