trend seasonality and autocorrelation Next the statistical methods of dealing with autocorrelation and non stationary time series are described This is followed by exponential smoothing to produce meaningful insights from noisy time series data At this point we shift focus towards predictive analysis and introduce autoregressive models such as ARMA and ARIMA for time series forecasting Later powerful deep learning methods are presented to develop accurate forecasting models for complex time series and under the availability of little domain knowledge All the topics are illustrated with real life problem scenarios and their solutions by best practice implementations in Python The book concludes with the Appendix with a brief discussion of programming and solving data science problems using Python Style and approach This book takes the readers from the basic to advance level of Time series analysis in a very practical and real world use cases The Massachusetts register ,1990 **New Scientist** ,1969 California.
