Distributed Artificial Intelligence, 1987 *Distributed artificial intelligence* Les Gasser, Michael N. Huhns, 1987

Distributed Artificial Intelligence Michael N. Huhns, 2012-12-02 Distributed Artificial Intelligence presents a collection of papers describing the state of research in distributed artificial intelligence DAI DAI is concerned with the cooperative solution of problems by a decentralized group of agents The agents may range from simple processing elements to complex entities exhibiting rational behavior The book is organized into three parts Part I addresses ways to develop control abstractions that efficiently guide problem solving communication abstractions that yield cooperation and description abstractions that result in effective organizational structure Part II describes architectures for developing and testing DAI systems Part III discusses applications of DAI in manufacturing office automation and man machine interactions This book is intended for researchers system developers and students in artificial intelligence and related disciplines It can also be used as a reference for students and researchers in other disciplines such as psychology philosophy robotics and distributed computing who wish to understand the issues of DAI

**Socionics** Klaus Fischer, Michael Florian, Thomas Malsch, 2005-12-14

This book includes contributions from an interdisciplinary field of research we call Socionics Based on a close cooperation between sociologists and researchers from distributed artificial intelligence and multiagent systems Socionics deals with the exploration of the emergence and dynamics of artificial social systems agent societies as well as hybrid man machine societies The aim is both to develop intelligent computer technologies by picking up theoretical concepts and methods from sociology and to improve sociological models of societies and organizations by using advanced computer technology The 15 articles in this state of the art survey combine selected contributions from sociology and informatics on the modeling construction and study of complex social systems with special regard to the problem of scaling multiagent systems The discussion focuses on four specific research areas multi layer modeling organization and self organization emergence of social structures and paths from an agent centered to a communication centered perspective in modeling multiagent systems

**Multi-Agent Systems for Concurrent Intelligent Design and Manufacturing** Weiming Shen, 2019-09-17 Agent Technology or Agent Based Approaches is a new paradigm for developing software applications It has been hailed as the next significant breakthrough in software development and the new revolution in software after object technology or object oriented programming In this context an agent is a computer system which is capable of act

**Intelligent Agents II - Agent Theories, Architectures, and Languages** Michael J. Wooldridge, Jörg P. Müller, Milind Tambe, 1996 This book is based on the second International Workshop on Agent Theories Architectures and Languages held in conjunction with the International Joint Conference on Artificial Intelligence IJCAI 95 in Montreal Canada in August 1995 The 26 papers are revised final versions of the workshop presentations selected from a total of 54 submissions also included is a comprehensive

introduction a detailed bibliography listing 355 relevant publications and a subject index The book is structured into seven sections reflecting the most current major directions in agent related research Together with its predecessor Intelligent Agents published as volume 890 in the LNAI series this book provides a timely and comprehensive state of the art report

*Intelligent Agents for Telecommunications Applications* Sahin Albayrak,1998 Intelligent agent and distributed AI DAI approaches attach specific conditions to cooperative exchanges between intelligent systems that go far beyond simple functional interoperability Ideally systems that pursue local or global goals coordinate their actions share knowledge and resolve conflicts during their interactions within groups of similar or dissimilar agents can be viewed as cooperative coarse grained systems The infrastructure of telecommunications is a world in transition There are a number of trends that contribute to this convergence of traditional telephony and data network worlds blurring of boundaries between public and private networks complementary evolution of wireline wireless and cable network infrastructures the emergence of integrated broadband multimedia networks and of course the information superhighway Up to now despite the effort that has gone into this area the field of intelligent agents research has not yet led to many fielded systems Telecommunications applications pose strong requirements to agents such as reliability real time performance openness security management and other integrated management and mobility In order to fulfil their promise intelligent agents need to be fully dependable and typically require an integrated set of capabilities This is the challenge that exists for intelligent agents technology in this application domain

Neuroscience: From Neural Networks to Artificial Intelligence Pablo Rudomin, 1993-06-25  
The Central Nervous System can be considered as an aggregate of neurons specialized in both the transmission and transformation of information  
Information here has been used for many purposes but the most important one is probably to generate a representation of the external world that allows the organism to react properly to changes in its external environment  
These functions range from such basic ones as detection of changes that may lead to tissue damage and eventual destruction of the organism and the implementation of avoidance reactions to more elaborate representations of the external world implying recognition of shapes sounds and textures as the basis of planned action or even reflection  
The question is how can we hope to understand the complexity inherent in this range of functionalities  
One of the distinguishing features of the last two decades has been the availability of computational power that has impacted the many areas of science concerned with this question  
An effort has been made within this book to cross boundaries and to have active scientists from different backgrounds and disciplines explain the basic principles which guide their investigations with the hope that this will lay the basis for a future collaborative effort to understand the principles of neural networks

This book highlights the latest research on distributed computing and artificial intelligence DCAI

2021 is a forum to present applications of innovative techniques for studying and solving complex problems in artificial intelligence and computing areas. The present edition brings together past experience, current work, and promising future trends associated with distributed computing, artificial intelligence, and their application in order to provide efficient solutions to real problems. This year's technical program will present both high quality and diversity with contributions in well established and evolving areas of research. Specifically, 55 papers were submitted to main track and special sessions by authors from 24 different countries representing a truly wide area network of research activity. Moreover, DCAI 2021 Special Sessions have been a very useful tool in order to complement the regular program with new or emerging topics of particular interest to the participating community. The technical program of the Special Sessions of DCAI 2021 has selected 23 papers. We would like to thank all the contributing authors, the members of the Program Committees, the sponsors IBM, Armundia Group, EurAI, AEPIA, APPIA, CINI, OIT, UGR, HU, SCU, USAL, AIR Institute, and UNIVAQ, and the Organizing Committee of the University of Salamanca for their hard and highly valuable work.
