Additives for Water-based Coatings Royal Society of Chemistry (Great Britain). Industrial Division. North West Region, 1990 *Additives for Water-based Coatings* D. R. Karsa, Royal Society of Chemistry (Great Britain). Industrial Division. North West Region, 1990 Water based coatings are formulated with a variety of chemical additives many of which result in complex interactions This book provides a useful introduction to the formulation of water borne coatings and looks at a variety of additives and extenders from a practical viewpoint It emphasises their performance and advantages in use method of formulation and gives an explanation of their physico chemical interactions The market for water based coatings continue to show significant signs of growth and this book will be of great interest to both technologists in and suppliers of additives to the surface coating industries

Surface Phenomena and Additives in Water-Based Coatings and Printing Technology Mahendra K. Sharma, 2013-11-11 Water based technology has undergone revolutionary changes during the past two decades Interest in the properties and uses of water based coatings paints and inks has continued to grow since the establishment of the Clean Air Act of 1970 The present book is devoted to recent developments and trends in water based coating and ink technology This volume is divided in three broad categories 1 Additives and Water based Coating Ink Systems 2 Surface Modifications and Wettability and 3 Ink Coating Formulations and Their characterization The role of various additives to improve the performance and properties of water based coatings with special reference to surface phenomena such as wettability adhesion surface energies dispersion stability particle size and size distribution are presented in these sections This volume documents the proceedings of the International symposium on Surface Phenomena and Additives in Water Based Coatings and Printing Technology sponsored by the 21st Annual Meeting of the Fine Particle Society FPS This meeting was held in San Diego California August 21 25 1990 The symposium upon which this volume is based was organized in four sessions emphasizing several basic and applied aspects of water based coatings and printing technology Major topics discussed include advances in water based technology water based flexo and gravure inks hydrophobically modified cellulosic thickeners organosilicones uv curable silicone release coatings surface characterization of TiO₂ pigments polymer substrates flexographic plates and coating films pigment wetting and dispersing agents hydrotrope effect in emulsion polymers film thickness control particle size measurements rheological properties and statistically designed mixtures for ink formulations

Advances in Additives for Water-based Coatings Gerry Davison, D. R. Skuse, 1999 Eight papers selected from a September 1997 symposium at the University of York England do not comprise a comprehensive review of water based additives but highlight significant recent developments in a number of important additive types Among the topics are legislative initiatives to reduce emissions of volatile organic compounds current technology and future developments in thickeners for waterbased systems specialty additives for the rheological control of waterborne systems defoaming agents coalescing solvents the application of biocides a novel dispersant for waterborne resin free pigment
