## **Building Entopia:**

**Master Plans and Encroachments** Faiza Moatasim, 2023-10-17 Among urban designers and municipal officials the term encroachment is defined as a deviation from the official master plan. But in cities today such informal modifications to the urban fabric are deeply enmeshed with formal planning procedures. Master Plans and Encroachments examines informality in the high modernist city of Islamabad as a strategic conformity to official schemes and regulations rather than as a deviation from them. For the new administrative capital of Pakistan designed in 1959 by Greek architect and planner Constantinos A. Doxiadis, Islamabad's master plan offers a clear template of formal urban design within which informal spaces and processes have been articulated. Drawing on deep archival research, wide-ranging interviews, and an array of visual material including photographs, maps, and architectural drawings, Faiza Moatasim shows how Islamabad's master plan is not simply a blueprint that guides future urban development or makes its violations apparent; it is used by both city officials and citizens to develop informal spaces that accommodate unfulfilled needs and desires of those living and working in the city. Master Plans and Encroachments is the first book that examines the informal practices of both the privileged and the underprivileged. The book highlights how low, middle, and upper income people do not randomly build informal spaces; they strategically use architectural techniques to support their informal claims to space, which are often met with the government's tacit approval. By focusing on those spaces in Islamabad's urban fabric that are not part of its official master plan, the book demonstrates how planning actually works in complex ways.

**Designing Zero Carbon Buildings** Ljubomir Jankovic, 2024-06-17 In this significantly revised third edition, Designing Zero Carbon Buildings combines embodied and operational emissions into a structured approach for achieving zero emissions by a specific year with certainty. Simulation and quantitative methods are introduced in parallel with analogue scale models to demonstrate how things work in buildings. Where equations are provided, this is also explained with common analogue objects, pictures, and narratives. A Zero Equation introduced in this book is not only explained as an equation but also as an analogy with a jam jar and spoons, making the book accessible for a range of audiences. Tasks for simple experiments, exercises, discussion questions, and summaries of design principles are provided in closing lines of chapters. This book introduces new case studies in addition to an updated case study of the Birmingham Zero Carbon House, applying embodied and operational emissions to assess their status using the Zero Equation. The approach introduced brings about a sense of realism into what true zero emissions mean. Written for students, educators, architects, engineers, modellers, practising designers, sustainability consultants, and others, it is a major positive step towards design thinking that makes achieving zero carbon emissions a reality.
