Robot Hans P. Moravec, 1999 In this compelling book Hans Moravec predicts that machines will attain human levels of intelligence by the year 2040 and that by 2050 they will surpass us But even though Moravec predicts the end of the domination by human beings his is not a bleak vision Far from railing against a future in which machines rule the world Moravec embraces it taking the startling view that intelligent robots will actually be our evolutionary heirs Intelligent machines which will grow from us learn our skills and share our goals and values can be viewed as children of our minds And since they are our children we will want them to outdistance us In fact in a bid for immortality many of our descendants will choose to transform into ex humans as they upload themselves into advanced computers This provocative new book the highly anticipated follow up to his bestselling volume Mind Children charts the trajectory of robotics in breathtaking detail A must read for artificial intelligence

technology and computer enthusiasts Moravec's freewheeling but informed speculations present a future far different than we ever dared imagine

The Ethics of Superintelligent Design Paul Golata, 2018-03-07 Artificial intelligence AI permeates Google searches the personal assistants in our smartphones and is all over our newsfeeds Watson's machine learning has already started to revolutionize many important industries including oncology law finance and entertainment The idea that man is about to increase his immediate surroundings with exponential gains in the level of intelligence over the coming generations is based upon a technological revolution and the potential for artificial superintelligence ASI It is within this context that there is a prevailing need for a discussion of its ethical implications As a Christian ethicist Paul Golata believes that the need for this conversation to be informed by Christian principles is imperative ASI is a move toward the proper handling of information However how a society interprets and applies this information is actually more pertinent than the raw amount of information it possesses This important ethical conversation is being led by humanistic thinkers who assume that all of reality is just matter in motion and that mind is nothing more than electrochemical activity in the wetware of human brains The Ethics of Superintelligent Design critically examines and challenges some of the most important trajectories of ASI while upholding the authority and inerrancy of the Bible the supernatural creation account a realistic view of the state of humanity and biblical ethics

Internet David Jefferis,2002 Learn all about the fascinating history of the Internet and how it works Finding information will never be the same in our online world as this book describes how the Web has changed research buying items teaching publishing and swapping information Issues of an individual s right to privacy are also explored Cambrian Intelligence Rodney Allen Brooks,1999 Until the mid 1980s AI researchers assumed that an intelligent system doing high level reasoning was necessary for the coupling of perception and action In this traditional model cognition mediates between perception and plans of action Realizing that this core AI as it was known was illusory Rodney A Brooks turned the field of AI on its head by introducing the behavior based approach to robotics The cornerstone of behavior based robotics is the realization that the coupling of perception and action gives rise to all the power of intelligence and that cognition is only in the eye of an observer Behavior based robotics has been the basis of successful applications in entertainment service industries agriculture mining and the home It has given rise to both autonomous mobile robots and more recent humanoid robots such as Brooks Cog This book represents Brooks initial formulation of and contributions to the development of the behavior based approach to robotics It presents all of the key philosophical and technical ideas that put this bottom up approach at the forefront of current research in not only AI but all of cognitive science
