Measuring Effectiveness in Humanitarian and Development Aid Andre M. N. Renzaho,2007 Donor countries are currently scaling up their aid programmes in response to strategies proposed through the Millennium Development Goals Recent positive research on the impact of foreign development aid has led to increased expectations on the part of donor countries Research suggests that per capita income growth over the last decade would have been lower in the absence of aid and also that public sector expenditure on health and education in developing countries would not have been as great without aid inflows However there still remain many significant gaps in knowledge on aid allocation and effectiveness This book addresses a number of these gaps and provides many new and important analytical insights into aid Among the topics covered are the interface between aid allocation and perceptions of aid effectiveness the inter recipient concentration of aid from non government organizations the year on year volatility of aid impacts of aid on public sector fiscal aggregates and evaluation of the country level impacts of aid The book is an essential companion for professionals engaged in aid policy reforms and also for scholars in the areas of development economics international finance and economics

Sciences is a catch all phrase that refers to the tools and methodologies used in nonlinear dynamics and complex systems theory to study physical systems that exhibit a complicated dynamics CNA is currently developing a multiagent based simulation of notional combat called ISAAC Irreducible Semi Autonomous Adaptive Combat a preliminary version of which is described in this report ISAAC takes a bottom up synthesist approach to the modeling of combat vice the more traditional top down or reductionist approach *Irreducible Semi-autonomous Adaptive Combat (ISSAC)* Andrew Ilachinski, Center for Naval Analyses, 1997 Multi-Agent-Based Simulation XIII Francesca Giardini, Frédéric Amblard, 2013-05-29 This book constitutes the thoroughly refereed post conference proceedings of the 13th International Workshop on Multi Agent Based Simulation MABS 2012 held in Valencia Spain in June 2012 The 11 revised full papers presented were carefully selected from 35 submissions The papers are organized in topical sections on modeling social interactions cognition and agents behaviors agents games and finance and methodologies and tools **Multi-Agent-Based Simulation** Scott Moss, Paul Davidsson, 2003-07-31 This volume is based on papers accepted for the Second International Workshop on Multi agent based Simulation MABS 2000 federated with the Fourth International Conference on Multi Agent Systems ICMAS 2000 held in Boston in July 2000 The purpose of MABS 2000 was to investigate and develop the synergy between software engineering for multi agent systems and agent based social simulation The papers included in the MABS 2000 workshop were selected either because they explore how agent interaction can be used to build multi agent systems or they offer examples of problem oriented rather than technique oriented systems No paper was selected if it specified a model or an issue to make it a previously chosen technique All of the papers in the volume have been reviewed and in many cases revised since the workshop Two papers by Edmonds and by Hales as well as the editorial introduction have been added to those accepted for the workshop As editors and workshop organisers we are very grateful to the participants who engaged enthusiastically in the discussions about both individual papers and the issues facing the MABS community Issues raised and positions taken in those discussions are reported in the editorial introduction We are also grateful to the authors for their punctuality and the grace with which they received and responded to editorial comments and requests Klaus Fischer the ICMAS 2000 workshops chair was exceptionally patient and diplomatic in reconciling our demands with the resources available

Benjamin M. Jensen, Christopher Whyte, Scott Cuomo, 2022-10-03 An in depth assessment of innovations in military information technology informs hypothetical outcomes for artificial intelligence adaptations In the coming decades artificial intelligence AI could revolutionize the way humans wage war The military organizations that best innovate and adapt to this AI revolution will likely gain significant advantages over their rivals To this end great powers such as the United States China and Russia are already investing in novel sensing reasoning and learning technologies that will alter how militaries plan and fight The resulting transformation could fundamentally change the character of war In *Information in War* Benjamin Jensen Christopher Whyte and Scott Cuomo provide a deeper understanding of the AI revolution by exploring the relationship between information organizational dynamics and military power The authors analyze how militaries adjust to new information communication technology historically to identify opportunities risks and obstacles that will almost certainly confront modern defense organizations as they pursue AI pathways to the future *Information in War* builds on these historical cases to frame four alternative future scenarios exploring what the AI revolution could look like in the US military by 2040 *Modeling Tactical Level Combat Using a Multi-Agent System Design Paradigm (GI Agent)* Joel S. Pawloski, 2001-03-01 In the past 60 years the Army has undergone a major reorganization eight times at the divisional level and numerous more times at unit levels below the division Each time the Army reorganized it s divisions a major testing program was involved But when a change in organization is done at unit levels below division often very little attention is paid to how the change will affect the unit When this happens unit leaders are forced to undertake one of the most difficult jobs in today s military incorporating new equipment into a unit or reorganizing a unit without an understanding of how the changes will affect the unit The Military modeling and simulation community has attempted to fill this need but the current set of single entity simulations are limited in their ability to replicate dynamic complex behavior This thesis is attempting to create a Multi Agent Simulation that will allow analysts and leaders to gain an understanding of the tactical employment affects of changing the organization of a company level infantry unit GI Agent is a simulation tool allowing the analyst and leader to experiment with the complex relationship between maneuver and unit organization without putting the unit in the field Combining agent based artificial intelligence techniques with artificial intelligence research from the computer gaming industry GI Agent creates a new paradigm for combat simulation The GI Agent software uses the RELATE architecture designed by LCDR Kim Roddy USN and Lt Mike Dixon USN *Multi-Agent-Based Simulation II* Jaime S. Sichman, Francois Bousquet, Paul Davidsson, 2003-02-05 This volume presents extended and revised versions of the papers presented at the Third International Workshop on Multi Agent Based Simulation MABS 2002 a workshop federated with the First International Joint Conference on Autonomous Agents and Multi Agent Systems AAMAS 2002 which was held in Bologna Italy in July 2002 This workshop was the third in the MABS series The earlier two were ganized as workshops of the two most recent ICMAS

conferences ICMAS 1998 Paris France and ICMAS 2000 Boston USA Revised versions of the papers presented at these workshops were published as volumes 1534 and 1979 in the Lecture Notes in Artificial Intelligence series One aim of the workshop was to develop stronger links between those working in the social sciences and those involved with multi agent systems We are pleased to note that many important conferences in various disciplines such as geography economics ecology sociology and physics have hosted workshops on MABS related topics and that many respected journals publish papers that include elements of MABS But although MABS is gradually acquiring legitimacy in many disciplinary fields much remains to be done to clarify the potential use of MABS in these disciplines Researchers from these disciplines have different points of view on issues such as time frame space geographical scales or organizational levels etc Moreover the interest in MABS goes beyond the scientific community as MABS models have been developed and used interactively with other communities as well

Multi-Agent and Multi-Agent-Based Simulation Paul Davidsson, 2005-03-07 This book constitutes the thoroughly refereed postproceedings of the Joint International Workshop on Multi Agent and Multi Agent Based Simulation MABS 2004 held in New York NY USA in July 2004 The 20 revised full papers presented have gone through two rounds of reviewing selection and improvement they present state of the art research results in agent based simulation and modeling The papers are organized in topical sections on simulation of multi agent systems techniques and technologies methodology and modeling social dynamics and application
