

Algorithm Bias: **Human** Biases in Disguise

Algorithm is a finite sequence of well-defined, computer-implementable instructions, typically to solve a class of problems or to perform a computation.

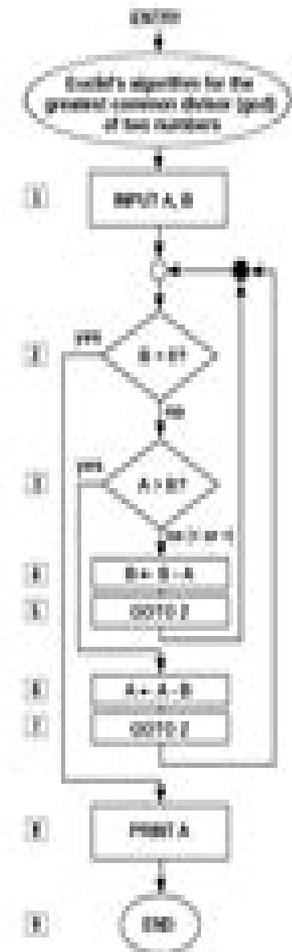

Everything seems to have artificial intelligence and machine learning built in according to those that market a product and those that have secretly been trading and collecting our data.

Experts and laypeople use terms and phrases with the same degree of confidence or 'knowledge'.

Some calculations are deemed 'protected' or 'secret' and are therefore not exportable.

Despite all the clever marketing, false assumptions and lack of knowledge, the concealed algorithms and the mathematics/analysis are predominately human biases not easily discernible.

Who accurate or transparent are the algorithms you come in contact with?

The Algorithmic Image Robert Rivlin, 1986 *Chromatic Algorithms* Carolyn L. Kane, 2014-08-13 These days we take for granted that our computer screens and even our phones will show us images in vibrant full color Digital color is a fundamental part of how we use our devices but we never give a thought to how it is produced or how it came about Chromatic Algorithms reveals the fascinating history behind digital color tracing it from the work of a few brilliant computer scientists and experimentally minded artists in the late 1960s and early 70s through to its appearance in commercial software in the early 1990s Mixing philosophy of technology aesthetics and media analysis Carolyn Kane shows how revolutionary the earliest computer generated colors were built with the massive postwar number crunching machines these first examples of computer art were so fantastic that artists and computer scientists regarded them as psychedelic even revolutionary harbingers of a better future for humans and machines But Kane shows the explosive growth of personal computing and its accompanying need for off the shelf software led to standardization and the gradual closing of the experimental field in which computer artists had thrived Even so the gap between the bright bold presence of color onscreen and the increasing abstraction of its underlying code continues to lure artists and designers from a wide range of fields and Kane draws on their work to pose fascinating questions about the relationships among art code science and media in the twenty first century

contributors who provide the latest and freshest perspectives **Forget Photography** Andrew Dewdney,2021-10-19 Why we must forget photography and reject the frame of reality it prescribes and delineates The central paradox this book explores is that at the moment of photography's replacement by the algorithm and data flow photographic cultures proliferate as never before The afterlife of photography residual as it may technically be maintains a powerful cultural and representational hold on reality which is important to understand in relationship to the new conditions Forgetting photography is a strategy to reveal the redundant historicity of the photographic constellation and the cultural immobility of its epicenter It attempts to liberate the image from these historic shackles forged by art history and photographic theory More important perhaps forgetting photography also entails rejecting the frame of reality it prescribes and delineates and in doing so opens up other relationships between bodies times events materials memory representation and the image Forgetting photography attempts to develop a systematic method for revealing the limits and prescriptions of thinking with photography which no amount of revisionism of post photographic theory can get beyond The world urgently needs to unthink photography and go beyond it in order to understand the present constitution of the image as well as the reality or world it shows Forgetting photography will require a different way of organizing knowledge about the visual in culture that involves crossing different knowledges of visual culture technologies and mediums It will also involve thinking differently about routine and creative labor and its knowledge practices within the institutions and organization of visual reproduction
