Marc Simmons, Principal, Ilwaco Middle School, Ocean Beach School District, Long Beach, WA. The ideas in this book are brought to life with examples of teachers and students in the classroom. The teacher voices, comments, and quotes lend credibility and are a big component of the book's strengths, as well as the visuals and graphics.

Rita Tellez, Math Coordinator, Ysleta Independent School District, El Paso, TX. *New York Math: Math A*, 2000. [Mechatronics by Bond Graphs](#) Vjekoslav Damic, John Montgomery, 2012-12-06. Bondgraphs are a well-established technique for the modelling of complex engineering systems. The subject of this book is an integrated modelling and simulation of mechatronics systems in a visual computer environment. The modelling is based on a system top-down and bottom-up approach. The mathematical models are generated in a form of differential algebraic equations and solved using numerical and symbolic algebra methods. The authors carefully explain a systematic procedure for developing the models using simple visual commands and construct a bondgraph at every level of decomposition. The integrated approach they develop is applied to mechanical, electrical, and control systems, multibody dynamics, and continuous systems. The book contains a powerful computer simulation package on the accompanying CD-ROM. The BondSim package supports top-down and bottom-up model development using component libraries.
