Algorithmically Specialized Parallel Computers Lawrence Snyder, Leah H. Jamieson, Dennis B. Gannon, 2014-05-10
Algorithmically Specialized Parallel Computers focuses on the concept and characteristics of an algorithmically specialized computer. This book discusses the algorithmically specialized computers, algorithmic specialization using VLSI and innovative architectures. The architectures and algorithms for digital signal speech and image processing and specialized architectures for numerical computations are also elaborated. Other topics include the model for analyzing generalized inter-processor pipelined architecture for search tree maintenance and specialized computer organization for raster graphics display. The data base applications of the FETCH AND ADD instruction, distributed parallel architecture for speech understanding and two parallel formulations of particle in cell models are likewise covered in this text. This publication is suitable for students, researchers, and professionals concerned with algorithmically specialized computers. NASA Tech Briefs, 1991 **Fast**

Algorithms and Their Implementation on Specialized Parallel Computers Jozef Mikloško, 1989. Recognizing the need for a comprehensive overview of new results, this book looks at the problems of creating fast numerical and nonnumerical algorithms. It also contains analyses of their properties and possibilities of their efficient implementation on specialized parallel computers. Instead of treating these problems separately, the book deals with them in their complexity, taking into account their mutual relationships. Attention is paid to the following topics: methods of creating fast parallel algorithms; parallel algorithms for associative computers; systolic algorithms and their implementation on specialized processors; algorithms for pipeline and matrix processors and for multiprocessors; solution of a system of linear equations on specialized computers; lower time bounds for SIMD type algorithms. Multi-Computer Architectures for Artificial Intelligence Leonard Uhr, 1987-02-20. This volume is the most current and complete evaluation of multi-computer networks. It presents an up-to-date and detailed survey which describes the large number of multi-computer architectures that have been built during the past few years and the even greater variety that are presently being built, designed, and explored. Special emphasis is given to approaches that show promise for handling complex real-world problems in real time. Describes the range of problems that confront workers in artificial intelligence (AI) and explains some of the major approaches being taken by AI researchers focusing on the robust, flexible, extremely fast, hence highly parallel systems. Presents judgements and opinions as to the most promising multi-computer architectures for AI, including a number of exciting multi-computer structures. Tutorial Supercomputers Kai Hwang, 1984
