Catalyst Poisoning:

Catalyst Poisoning L. Louis Hegedus, Robert W. McCabe, 1984 **Activation, Deactivation, and Poisoning of Catalysts** John Butt, 2012-12-02 Activation Deactivation and Poisoning of Catalysts deals with the circumstances and mechanisms underlying catalyst activation deactivation and poisoning The emphasis is on the techniques for handling deactivating systems not on results per se Deactivation by fouling and sintering is given consideration This book is organized into three sections and consists of 12 chapters The first part is devoted to a systematic development of the manner in which catalysts are activated deactivated poisoned and in some cases reactivated on a microscopic basis The first chapter explains the concept of the active center as utilized in catalysis along with catalyst regeneration rejuvenation and detoxification In the second part the reader is introduced to the problem of heat transfer as well as the transport of reactants and products in the interior of the particle coupled with chemical reaction therein The macroscopic deactivation behavior of the catalyst particle is described in terms of fundamental kinetic deactivation phenomena and of parameters governing heat and mass transfer The last part is primarily concerned with a collection of catalyst particles within the reactor with emphasis on the global activity of the reactor In the last chapter a pragmatic approach is presented to predict the design and performance of chemical reactors containing a deactivating catalyst This book is written for catalytic chemists researchers reactor designers and students interested in catalyst activation deactivation and poisoning Catalyst Deactivation 1987 G.F. Froment, B. Delmon, 1987-09-01 This Symposium on Catalyst Deactivation ensues those held at Berkeley 1985 Antwerp 1980 and Berkeley 1978 The three main topics emphasised at this most recent symposium were the techniques used in deactivation studies the mechanisms of catalyst deactivation and modelling With respect to the first it became apparent that the study of deactivation faces even more difficulties than the characterization of fresh catalysts and the measurement of activity or selectivity due to the multiplicity of interacting processes occurring during deactivation Quite substantial progress has been made recently in the understanding of the mechanisms of various deactivation processes particularly coking and extra time was accorded to these topics at the symposium The third topic corresponds to a problem which is very central to development studies and to the chemical engineering aspect of catalysis it deals with the representativity of accelerated tests and the modelling of the deactivation phenomena Deactivation and Poisoning of Catalysts J. Oudar, 1985-07-02 Deactivation and Poisoning of Catalysts presents the most current research in the area of heterogeneous catalysis It focuses on the chemically induced effects associated with bonded surface species that cause catalyst activity decline and in some cases a change in catalyst specificity In addition this volume examines poisoning of dispersed metal catalysts the thermodynamics of sulfur metal and carbon metal interactions model poisoning reactions on single crystals deactivation in petroleum refining and petrochemical processes coking of metal catalysts and more The new approaches and solutions to catalyst deactivation and poisoning presented in this guide are invaluable to all heterogeneous catalysis specialists including

chemical and petroleum engineers and surface synthetic physical and industrial chemists Book jacket **Hydrocracking Science and Technology** Julius Scherzer,A.J. Gruia,1996-08-06 Presents advances in the field of hydrocracking The volume includes catalytic materials reaction mechanisms and pathways as well as hydrocracking processes and applications It discusses hydrocracking processes and hydrocracking technology in catalytic dewaxing resid upgrading and fluid catalytic cracking feedstock improvement *Sulfur Poisoning of Catalysts* ,1978 **Low-Temperature Selective Catalytic**

Reduction Catalysts Weiguo Pan,Ruitang Guo,2024-11-18 This book systematically describes the latest research in low temperature selective catalytic reduction catalysts providing a theoretical basis and technical support It first introduces the characteristics and formation mechanism of NO_x and presents the control technology of nitrogen oxides at this stage along with the mechanism of low temperature selective catalytic reduction reactions In addition the preparation methods and characterization techniques of these catalysts have been introduced From this readers can master the main technical methods required in low temperature selective catalytic reduction catalyst research Furthermore it also covers the anti poisoning mechanism of Mn based Ce based Fe based Cu based and low temperature selective catalytic reduction catalysts presenting readers with the latest research achievements Given its scope this book appeals to a broad readership particularly professionals at universities as well as engineers engaged in low temperature selective catalytic reduction fields It also can be treated as a valuable reference for scholars studying the field *Ammonia Synthesis Catalysts: Innovation And Practice*

Huazhang Liu,2013-03-21 This book provides a review of worldwide developments in ammonia synthesis catalysts over the last 30 years It focuses on the new generation of Fe_{1-x}O based catalysts and ruthenium catalysts both are major breakthroughs for fused iron catalysts The basic theory for ammonia synthesis is systematically explained covering topics such as the chemical components crystal structure preparation reduction performance evaluation characterization of the catalysts the mechanism and kinetics of ammonia synthesis reaction Both theory and practice are combined in this presentation with emphasis on the research methods application and exploitation of catalysts The comprehensive volume includes an assessment of the economic and engineering aspects of ammonia plants based on the performance of catalysts Recent developments in photo catalysis electro catalysis biocatalysis and new uses of ammonia are also introduced in this book The author Professor Huazhang Liu has been engaged in research and practice for more than 50 years in this field and was the inventor of the first Fe_{1-x}O based catalysts in the world He has done a lot of research on Fe₃O₄ based and ruthenium based catalysts and has published more than 300 papers and obtained 21 patents during his career
